How many COVID-19 cases are there in your country?

View your country data in the Country View tab

View and Download COVID-19 Case Surveillance Public Use Data

Data Sources, Performance & Notes: Total cases and deaths to date for COVID-19 is nationally notifiable disease, are described in an jos updated reports COVID-19 reporting statement and case definition. Data are from the National Notifiable Diseases Surveillance System (NNDSS). NNDSS is a system in which participants transmit disease case information to CDC. Some jurisdictions implement these case classifications. More information on how cases are counted in the COVID-19 Case Surveillance Public Use Data and COVID-19 Frequently Asked Questions.

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of Florida, which reported cases beginning March 6, 2020. Data for Florida, Ohio, and Oregon are based on counts include confirmed COVID-19 cases and deaths as reported by U.S. Centers for Disease Control and Prevention (CDC). Data for Florida, Ohio, and Oregon are based on counts include confirmed and probable COVID-19 cases and deaths. Data for CDC and New York State are based on counts of COVID-19 cases and deaths reported to CDC. Data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 cases and death data that are not available to CDC are denoted by NA.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases and deaths per 100,000 people. Rates are calculated using the 2019 Census estimates. Rates per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths in a given day, is grouping days divided by Census 100,000 people using the U.S. Census Bureau, 2019 American Community Survey 1-year estimates. Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019 American Community Survey 1-year estimates.

*2019 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are updated through a combination process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from those posted on the CDC Data Tracker for a variety of reasons, including differences in timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 cases from previous data may be continually revised as more records are received and processed. Not all jurisdictions report cases daily; some counts are reported in batches and may increase COVID-19 case and death counts on different days and appear as spikes. The process used for defining COVID-19 cases and deaths differs among other sites may differ.

On 10 December, Texas reported 171,305 historical counts of probable cases with dates between 1 November and 10 December. This raised the total number of new cases in both Texas and the U.S. during this time period and significantly affects the 7-day rolling average of new cases.
