CDC COVID Data Tracker

Maps, charts, and data provided by CDC

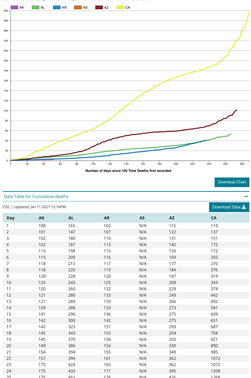
Compare Trends in COVID-19 Cases and Deaths in the US

Reported to the CDC by State or Territory

View: Cases Deaths
Metric: Raw Totals Rate per 100,000
Scale: Linear Logarithmic
Select up to 4 states/territories:
Alaska × Alabama × Arkansas × American Samoa × Arizona × California ×
Show full US Data (available only in logarithmic scale)

Cumulative deaths attributed to COVID-19, reported by CDC, in AK, AL, AR, AS, AZ, and CA

Cumulative deaths, by number of days since 10 deaths, reported to CDC



Data Table for Cumulative deaths

CDC | Updated Jan 11 2021 12:10 PM

Data Sources, References & Notes Data Sources, References & Notes:

The case classifications for COVID-19, a nationally notifiable disease, are described in an as updated interim COVID-19 position statement and case definition issued by the Council of State and Territorial Epidemiologists, beginning with cases diagnosed in 2020. Some states and jurisdictions also include probable COVID-19 cases in their counts and reports. Counts for COVID-19 case surveillance data can be found at CDC's COVID-19 Web page.

Total cases are based on aggregate counts of COVID-19 cases reported by the states and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City, and U.S. Dependencies. Counts for Puerto Rico, Guam, and the Virgin Islands include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately. Data for New York State (now total cases and deaths for the state excluding data for NYC, COVID-19 cases and death data that are not available to CDC are included.

The figure and corresponding data table can be modified to show COVID-19 cases and death trends for up to six states or territories. When daily cases of COVID-19 are displayed, the index date is when 10 or more daily cases were first recorded. When daily deaths of COVID-19 are displayed, the index date is when 5 or more daily deaths were first recorded. For ease of these measures, the 7-day moving average of new cases or deaths (current day + 3 preceding days divided by 7) was calculated to smooth expected variations in daily counts since the beginning of the pandemic.

When cumulative cases or deaths of COVID-19 are displayed, the index date is when 100 total cases or deaths were first recorded. The trend line shows the cumulative cases or deaths by number of days since the index date.

When daily case or death rates per 100,000 are displayed, the index date is when 20 average daily cases or deaths per 100,000 people was first recorded. The trend line shows the 7-day moving average of new cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates for the number of days since the index date.

When cumulative case or death rates per 100,000 are displayed, the index date is when 0.0 total cases per 100,000 people was first recorded. The trend line shows the total cases per 100,000 using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates for the number of days since the index date.

*2019 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case surveillance dataset is established through a confirmation process with each jurisdiction COVID-19 case numbers reported on other websites may differ from what is reported on CDC COVID Data Tracker due to differences in timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. COVID-19 case counts from previous dates may fluctuate as data from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily, some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases displayed by other sites may differ.
