Supplemental Table of Contents

Supplemental Figure 1. ART eligibility status of adults (≥15 years) at enrollment and outcomes during the periods (1) between enrollment and reaching ART eligibility and (2) between reaching eligibility and initiation of ART

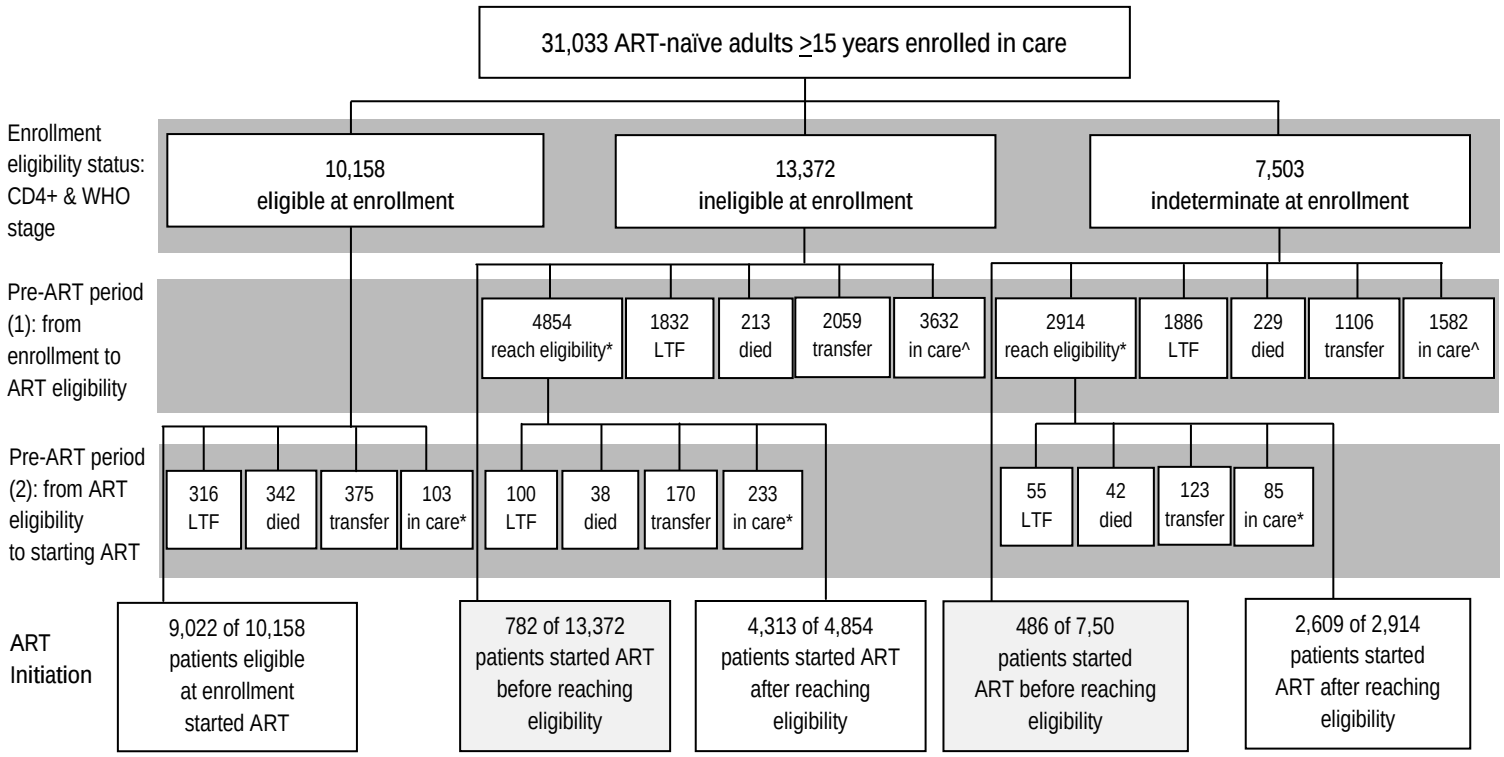
Supplement Figure 2. Cumulative incidence of reaching ART eligibility among adult patients in Rwanda who were ineligible or indeterminate at enrollment (N=20,875)

Supplemental Figure 3.Cumulative incidence of ART initiation by year of enrollment among Rwandan patients who were eligible at enrollment at 41 health facilities (N=10,158)

Supplemental Figure 4. Cumulative incidence of ART initiation after reaching ART eligibility among adult Rwandan patients who were ineligible or indeterminate at enrollment (and reached eligibility) at 41 health facilities (N=7,768)

Supplement Figure 5. Median CD4+ cell counts at enrollment (N=26,454) and at ART initiation (N=15,568) among adults in Rwanda by eligibility group

Supplemental Figure 1. ART eligibility status of adults (≥15 years) at enrollment and outcomes during the periods (1) between enrollment and reaching ART eligibility and (2) between reaching eligibility and initiation of ART



^Patients remaining in care at end of follow-up without reaching eligibility
*Patients remaining in care and eligible but not started on ART at end of follow-up
