[1] Data will update as soon as they are reviewed and verified; otherwise by 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19 is a nationally notifiable disease, and described in yet updated cases to CDC surveillance and notifications received for Centers of State and Territorial Health Officials (CSTE) on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC reports COVID-19 case surveillance data can be found in COVID-19 CDC webpages.

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC), and may differ from other COVID-19 case counts reported by other agencies. For example, Alaska, Guam, Northern Mariana Islands, Puerto Rico, and Virgin Islands provide case counts and deaths as reported by U.S. states, N.Y. territories, New York City (NYC), and the District of Columbia from their respective jurisdictions. Counts for certain jurisdictions may be probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show counts for all cases and deaths in the state except for those in NYC. Data for the United States include the 50 states, the District of Columbia, and reported cases and deaths from the Federal Bureau of Prisons. Data for the United States may differ from other sources due to differences in counting cases by the date of the specimen collection versus the date of reporting. Therefore, the number of historical cases and deaths reported on CDC's website may differ from the state data as reported by CDC and not necessarily the date the case or death was recorded in the state.

The figure and corresponding table show cumulative deaths attributed to COVID-19 and cumulative death rates (per 100 thousand) by up to six states or territories. When daily cases of COVID-19 are displayed, the index date is when 100 total cases or deaths first were reported. When daily deaths attributed to COVID-19 are displayed, the index date is when 100 total deaths were reported. Rates are based on the 7-day average of new cases or deaths (current day + 3 preceding days divided by 7) because calculations based on smooth exponential curves are more stable than raw counts.

When cumulative cases or deaths of COVID-19 are displayed, the index date is when 100 total cases or deaths were first recorded. The line shows the cumulative cases or deaths by number of days since the index date.

When daily case or death rates per 100,000 are displayed, the index date is when 20 average daily cases or deaths per 100,000 people was first recorded. The line shows the 7-day average rate by number of days since the index date. Population estimates are based on the U.S. Census Bureau, 2019 American Community Survey 1-year estimates for the number of days since the index date.

When cumulative case or death rates per 100,000 are displayed, the index date is when 0.3 total cases per 100,000 people was first recorded. The line shows the cumulative cases or deaths by number of days since the index date. Population estimates are based on the U.S. Census Bureau, 2019 American Community Survey 1-year estimates for the number of days since the index date.

*2019 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case numbers are compiled through a combination of notifications received with each jurisdiction. COVID-19 case numbers reported on other websites may differ from what is posted on CDC. COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may be up to 24 hours. CDC COVID-19 counts from previous days are continually revised as more records are received and processed. Not all jurisdictions report counts daily. Some counts are reported less frequently and may include COVID-19 deaths that occurred on different intervals and subpopulations. For more information, see Technical Notes and Frequently Asked Questions.
