COVID Data Tracker

Cases: 25,780,144 (Cases in the U.S.)
Total Vaccines Administered: 29.6M
Deaths: 435,151 (Deaths in the U.S.)

Compare Trends in COVID-19 Cases and Deaths in the US

Reported by the CDC by State or Territory. Maps, charts, and data provided by the CDC, updated daily by 8 pm ET

View: Cases, Deaths
Measure: Daily, Cumulative
Metric: Raw Totals, Per 100,000
Scale: Linear, Logarithmic

Select up to 5 states or territories:
California × Florida × Georgia × North Carolina × New York* × Texas ×

Show full US Data (available only in logarithmic scale)

New deaths attributed to Covid-19, reported to CDC, in CA, FL, GA, NC, NY, and TX
Seven-day moving average of new deaths, by number of deaths, and seven-day moving average of new deaths per million people

Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, data updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19 is a nationally notifiable disease, are described in the surveillance case definition for COVID-19 and are updated weekly, issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. Some information on how CDC collects COVID-19 surveillance data can be found in the COVID-19 FAQ webpage.

Total cases are based on aggregate counts of COVID-19 cases reported by states and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, or persons who were on the Diamond Princess cruise ship who tested positive for COVID-19 while in U.S. states, U.S. territories, New York City and the District of Columbia. Data for the previous day, based on jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately due to New York State show total cases and deaths for the same reporting period, while New York City shows cases and deaths that are not available to CDC but derived with an NCR. For aggregate state level data, CDC calculates the number of new cases by subtracting the previous cumulative total from the current cumulative total. This can sometimes result in negative numbers. Historical data are typically updated unless requested otherwise. Reporting delays in the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The figure and corresponding data table can be modified to show COVID-19 case and death trends for up to six states or territories. When a state's count of COVID-19 is not displayed, the value is zero or not reported to CDC or not applicable for that state. When daily deaths attributed to COVID-19 are displayed, the index day is when 5 average daily deaths were first recorded. When cumulative deaths attributed to COVID-19 are displayed, the index day is when 5 cumulative deaths were first recorded. When cumulative cases of COVID-19 are displayed, the index day is when 74 cases were first reported to CDC.

When cumulative cases or death rates per 100,000 are displayed, the index is when 0.5 average daily cases or deaths per 100,000 people were first recorded. The trend line shows the 7-day moving average of new cases or deaths per 100,000 people. Population denominators are based on the 2019 Census Bureau, 2019 American Community Survey 1-year estimates for the number of resident persons in the state.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Marianas Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case numbers are validated through a confirmation process with each jurisdiction. COVID-19 case numbers reported on other websites may differ from what is posted on CDC's COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous days may change because of the process of reviewing and verifying cases and deaths reported to CDC. Jurisdictions may report some counts prior to validation, but they will be included in CDC's COVID-19 case and death counts at different reporting cycles and updates. The process used for finding and confirming COVID-19 cases in Puerto Rico is delayed by other sites may differ.
