COVID Data Tracker

Cases: 25,780,144 — Cases in last 7 days: 29,64 — Total Vaccines Administered: 435,151 — Deaths: 435,151 — Deaths in last 7 days: 0

Compare Trends in COVID-19 Cases and Deaths in the US

Reported on the CDC by State or Territory. Maps, charts, and data provided by the CDC, updated daily by 8 pm ET.

View: Cases / Deaths
Measure: Cases / Deaths
Metric: Raw Totals / Cases per 100,000 / Rate per 100,000
Scale: Linear / Logarithmic

Select up to 6 states or territories: California × Florida × Georgia × North Carolina × New York* × Texas ×

Show full US data (available only in logarithmic scale)

Cumulative deaths attributed to Covid-19, reported to CDC: in CA, FL, GA, NC, NY, and TX
Cumulative deaths, by number of days since 100 total deaths first reached

How do your state's trend lines compare to other countries?

See global FAQ's and charts for comparisons.

View and Download COVID-19 Case Surveillance Public Use Data

Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in the Council of State and Territorial Epidemiologists (CSTE) Interim-20-ID, Coronavirus Disease 2019 (COVID-19) and Middle East Respiratory Syndrome (MERS) Case Definition, revised to include laboratory and epidemiologic criteria for probable and confirmed classifications. More information on how COVID-19 case surveillance data can be found at CDC's COVID-19 FAQ webpage.

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of probable cases/deaths from Florida, Georgia, and States from Michigan, Ohio, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by state and territorial jurisdictions to CDC. Probable cases and deaths are included in the totals, but are tabulated and displayed in jurisdictions which include COVID-19 probable cases and deaths. Cases and deaths in Florida are based on reports received from the Florida Department of Health (FDOH). Cases and deaths for the state excluding data for NYC, COVID-19 case and death data are based on aggregate counts CDC has received with fields for age, sex, and date of onset. Weekly CDC COVID-19 case and death data are based on cases or death counts by jurisdiction of residence, regardless of when they were reported to the state from the city/county. Jurisdictions may report cases and deaths using different criteria, therefore, the number reported in each jurisdiction may differ. Deaths presented in CDC's COVID-19 Case Surveillance Public Use Data set include only those with a date of death and reported by the state to CDC.

The figures and corresponding data table can be modified to show COVID-19 case and death trends for up to six states or territories. Data can be displayed on a linear or logarithmic scale. Cumulative totals for cases and deaths can be displayed by number of days since 100 total cases or deaths have been reached. When daily data is displayed in a line chart, a 7-day average (moving average) is also displayed. For both of these measures, the 7-day moving average of new cases or deaths (current day + 6 preceding days) divided by 7 was calculated to smooth reporting irregularities in daily counts over the 7-day period.

When cumulative cases or deaths of COVID-19 are displayed, the index date is when 100 total cases or deaths were first reached. The chart shows the cumulative cases or deaths by number of days since that date.

When daily cases or death rates per 100,000 are displayed, the index date is when 31 average daily cases or deaths per 100,000 were first reached. The trend lines show the 7-day moving average of daily cases or deaths per 100,000 people using the U.S. Census Bureau's 2019 American Community Survey 1-year estimates by the number of days since the index date.

*NYC population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case numbers are validated through a confirmation process with each jurisdiction. COVID-19 case numbers reported on other websites may differ from what is posted on CDC COVID Data Tracker due to the timeliness of reporting and COVID Data Tracker updates which may differ by up to 24 hours. CDC COVID-19 cases from jurisdictions that report probable cases and deaths are included in the totals, but are tabulated and displayed in jurisdictions which include COVID-19 probable cases and deaths. Some recent increases in reported COVID-19 cases and deaths may be due to cases and deaths that were not previously reported to CDC, but were identified and confirmed by state and territorial health departments and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.
