Trends in Number of COVID-19 Vaccinations in the US

Maps, charts, and data provided by the CDC, updated daily by 8 pm ET †

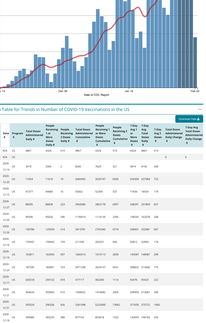
Select a program:
United States

Metric:
- Total Doses Administered
- People Receiving 1 or More Doses
- People Receiving 2 Doses

View:
- Cumulative
- Daily Count
- Daily Change Reported

Show:
- 7-Day moving average

Daily Change in the Total Number of Administered Doses Reported to CDC by the date of CDC Report, United States



Data Table for Trends in Number of COVID-19 Vaccinations in the US

View and Download COVID-19 Case Surveillance Public Use Data

Data updates as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data on doses of vaccine administered include data reported by CDC as of 4:00 ET of the day of reporting. Vaccination data on the CDC COVID Data Tracker may differ from jurisdiction-specific data because of differences in reporting practices and timeliness of data reporting.

Bars show trends for the total number of doses administered and people receiving doses of vaccine for the United States. We also show data for the Federal Pharmacy Partnership for Long-Term Care (LTC) Program, which is a federal COVID-19 vaccination program. The doses are shown in three ways: 1) the cumulative total number of doses administered, 2) the daily change in cumulative total doses administered, and 3) the daily change in cumulative total doses administered for the state doses are reported on the CDC COVID Data Tracker.

Bars shown in the Darker Blue shades represent the trend-based five-day rolling average of the number of vaccine administrations might be impacted the most by a change in reporting practices or administrative factors affecting the number of doses reported on a given day.

Doses reported as administered before the official beginning of the national vaccine program on 12-14-2020 (the first day of vaccination in the figures) are not included in the data table as "N/A" and included in the cumulative count of total doses administered.

Definitions:

Total doses administered are counts of individual COVID-19 vaccine doses administered as reported to CDC by state, territorial, and local public health agencies. Doses administered include both doses in a series.

People receiving 1 or more doses are the total number of people who have received at least one dose of vaccine. People receiving 2 doses represent the number of people who have also received a second dose of vaccine. †The number of people receiving 1 or more doses and the number of people receiving 2 doses are not reported by date of administration, but by date of CDC report. Because the method used to determine dose numbers needs to be applied across historic administration data, recipient ID, and date of administration, there may be instances where the number of people receiving 1 or more doses or 2 doses may decrease from one day to the next. This may occur when a recipient's earliest dose is reported to CDC as having been administered on a date that is earlier than the date that it was reported to CDC as the date on which they received their first dose. Decreases in the number of people receiving 1 or more doses and the number of people receiving 2 doses may also occur because of routine data quality improvements, such as removing duplicate records or correcting dates that are reported in an improper format.

Cumulative counts represent the number of reported doses administered, the total number of people receiving 1 or more doses, and the number of people receiving 2 doses since the beginning of the COVID-19 vaccination program in the United States and jurisdiction-specific programs.

Daily counts represent the number of reported doses administered, the number of people receiving 1 or more doses, and the number of people receiving 2 doses by date of vaccine administration. This represents the actual date a person received the vaccine.

Daily change reported represents the daily change in cumulative counts reported to CDC. For the most recent date of doses administered in the United States, the daily change is displayed by the date that CDC first reported the counts in the COVID Data Tracker.
