Compare Trends in COVID-19 Cases and Deaths in the US

Reported by the CDC by State or Territory. Maps, charts, and data provided by the CDC, updated daily by 6 pm ET

View: Cases / Deaths
Measure: Daily / Cumulative
Metric: Raw Counts / 7-day Moving Average / Per 100,000 / Rate per 100,000
Scale: Linear / Logarithmic

Select up to 4 states or territories:
California × Florida × Georgia × New York* × Pennsylvania × Texas ×

Show full US Data (available only in logarithmic scale)

New deaths attributed to Covid-19, reported to CDC, in CA, FL, GA, NY, PA, and TX
Seven-day moving average of new deaths, by reported date of injury (7-day average daily deaths first reported on 3/18/2020)

Data and Methods | COVID-19 Case Surveillance Public Use Data

*Data will update as soon as they are received and reviewed, oftentimes before 6 pm ET. However, daily updates may be delayed due to delays in reporting.

Data Sources, Reference & Notes: The case classifications for COVID-19 is a nationally notifiable disease, are described in the surveillance case definition, laboratory criteria and vital records criteria. Case counts in this dashboard are based on the date the case was first reported to CDC or the date a case was reported in these jurisdictions in these case classifications. Non-confirmation or free CDC collects COVID-19 case surveillance data can be found at COVID-19 CDC Dashboards.

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed and probable cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia (DC) to the National Notifiable Diseases Surveillance System (NNDSS) or, for NYC and DC, directly to CDC. Beginning April 5, 2020, CDC began separately collecting data for New York City and place counts and deaths for the cases excluding data for NYC. COVID-19 deaths are counted when deaths that are not available to CDC, and are counted with death, for aggregate state level data. CDC calculates the number of new cases and deaths by subtracting the previous cumulative count from the current cumulative count. Cases and deaths are displayed in chronological order as the originally published counts requested by the state. Negative values in the number of new cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The figures and corresponding data table can be modified to show COVID-19 case and death trends for up to six states or territories. When data for a state or COVID-19 are displayed, the index date is the date when 3 average daily cases first were recorded. When daily deaths attributed to COVID-19 are displayed, the index day is when 3 average daily deaths were first recorded. The cumulative number of cases and deaths for the state or COVID-19 are displayed in the table for the index date and later. The table can be sorted in descending order to display counts since the index date.

When cumulative counts of deaths or COVID-19 are displayed, the index date is when 100 total cases or deaths were first recorded. The trend line shows the cumulative cases or deaths by number of days since the index date.

When cumulative case or death rates per 100,000 are displayed, the index date is when 3 average daily cases or deaths per 100,000 were first recorded. The trend line shows the total cases per 100,000 using the U.S. Census Bureau, 2019 American Community Survey 1-year estimates for the number of people in the state.

*2019 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Marianas Islands, Palau, Puerto Rico, Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case numbers are validated through a conference process with each jurisdiction. COVID-19 case numbers reported on other websites may differ from what is posted on CDC COVID Data Tracker due to differences in timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous days may differ from previous reports because of the addition of new cases and the deletion of cases found to be duplicate or not to meet the case definition for COVID-19. Deaths from COVID-19 can also be affected by delays in death reporting and updating. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.
