Trends in Number of COVID-19 Vaccinations in the US

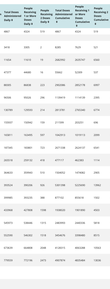
Maps, charts, and data provided by the CDC, updated daily by 8 pm ET.

Select a program:
United States

Metric:
- Total Doses Administered
- People Receiving 1 or More Doses
- People Receiving 2 Doses

View:
- Cumulative
- Daily Count
- Daily Change Reported

Show:
- 7-Day moving average



Daily Change in the Total Number of Administered Doses Reported to CDC by the date of CDC Report, United States

Data Table for Trends in Number of COVID-19 Vaccinations in the US

View and Download COVID-19 Case Surveillance Public Use Data

Data updates as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data on doses of vaccine administered include data received by CDC as of 4:00 ET on the day of reporting. Vaccination data on the CDC COVID Data Tracker are updated daily, except on weekends and holidays, when it may be updated less frequently due to reduced staffing.

Data shown include the total number of doses administered and people receiving doses reported to CDC by the United States. We also show the first dose of the Pfizer-BioNTech and Moderna COVID-19 vaccines, which is a dose of either vaccine that fully vaccinates a person, and the second dose of the two-dose series. To be conclusive, total of one dose administered is the sum of one-dose regimens and first doses of two-dose regimens. Data are not conclusive for other doses administered (e.g. third or fourth doses) or for the Janssen (Johnson & Johnson) COVID-19 vaccine, which is a one-dose regimen.

Bars shown in the darker blue shade represent the more recent five days of reporting where the number of vaccine administrations might be impacted the most by delays in reporting, and data for these days are subject to more frequent updates than data in the lighter blue shade.

Doses reported as administered within the daily change in the cumulative total of administered doses in the Vaccination Trends Data Table may be reported as far back as the date when a vaccine was first authorized in the United States, and may include doses administered outside the United States or to people who are not residents of the United States.

Definitions:

Total doses administered are counts of individual COVID-19 vaccine doses administered as reported to CDC by state, territorial, and local public health agencies and federal agencies participating in vaccination.

People receiving 1 or more doses represent the total number of people who have received at least one dose of vaccine. People receiving 1 or more doses represent the number of people who have received a dose of vaccine. This number includes people who have received one dose of a two-dose series and the number of people receiving 1 dose of a one-dose series (Janssen). People who have received both doses in a two-dose series are counted only once in this number. Data are based on the jurisdiction where the administration dose occurred, if available, and otherwise on the jurisdiction of residence. Because the method used to determine dose numbers needed to be applied across multiple jurisdictions, the number of people receiving 1 or more doses is an estimate. Because not all jurisdictions report the number of people receiving 1 or more doses, it is also determined for nearly all reported doses administered but, because there are some missing doses for dose number, the sum of people receiving 1 or more doses reported by jurisdiction may be lower than the number of doses reported as administered. Moderate, severe, and severe numbers reported when there are fewer weeks of the vaccination program might lead to spurious rates of reporting errors.

Cumulative counts represent the total number of people or doses administered, the total number of people receiving 1 or more doses, and the total number of people receiving 2 doses since the beginning of the vaccination program, regardless of the current reporting period.

Daily counts represent the number of reported doses administered, the number of people receiving 1 or more doses, and the number of people receiving 2 doses by date of vaccine administration. This represents the actual date a person received the vaccine.

Daily change represents the daily change in the cumulative total of reported doses since the last reporting period. For example, if 100 doses represent the number of people who have received a second dose in the United States in the last 24 hours and 150 doses have been administered in the United States since the last reporting period, then the daily change is calculated by the total doses reported this week minus the total doses reported last week, or 150 - 100 = 50 doses.

Bars shown in the darker blue shade represent the more recent five days of reporting where the number of vaccine administrations might be impacted the most by delays in reporting, and data for these days are subject to more frequent updates than data in the lighter blue shade.

Doses reported as administered within the daily change in the cumulative total of reported doses since the last reporting period may be reported as far back as the date when a vaccine was first authorized in the United States, and may include doses administered outside the United States or to people who are not residents of the United States.
