Trends in Number of COVID-19 Vaccinations in the US

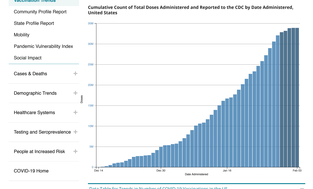
Maps, charts, and graphs provided by the CDC, updated daily by 8 pm ET.

Select a program:
- United States

Metric:
- Total Doses Administered
- People Receiving 1 or More Doses
- People Receiving 2 Doses

View:
- Cumulative
- Daily Count
- Daily Change Reported

Cumulative Count of Total Doses Administered and Reported to the CDC by Date Administered, United States



Data Table for Trends in Number of COVID-19 Vaccinations in the US

View and Download COVID-19 Case Surveillance Public Use Data

Trend values are updated as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data on doses of vaccine administered include doses received by CDC as of 4:00 ET on the day of reporting. Vaccination data on the CDC COVID Data Tracker are updated daily, except on weekends, when updates may be delayed by one business day. Vaccination data is preliminary.

Data on vaccines administered to date in the United States are based on reporting doses of vaccine to the United States. We do not show data for the Federal Pharmacy Partnership for Long Term Care (LTC) Program which is a vaccination program for residents and staff of long term care facilities. We also do not show data for doses given in three ways: 1) the complete total of doses given in the Veterans Health Administration (VHA), Department of Defense (DoD), and Indian Health Service (IHS) vaccination administration data, and 2) the daily change in cumulative total doses administered by the state where doses were reported in CDC COVID Data Tracker.

Rate, shown in the darker blue shade, represents the trend moving average of reporting where the number of vaccine administrations might be impacted the most by a lag in reporting, such as a large number of administrations reported in a single day, or a day with no reporting.

Doses reported as administered before December 14, 2020 are not included in the cumulative count for vaccines administered to date but are included in the rate table as "N/A" and included in the cumulative count of total doses administered in the CDC COVID Data Tracker.

Definitions:

Total doses administered are counts of individual COVID-19 vaccine doses administered as reported to CDC by state, territorial, and local public health agencies and by the Federal Pharmacy Partnership for LTC.

People receiving 1 or more doses represent the total number of people who have received at least one dose of vaccine. People receiving 2 doses represent the number of people who have also received a second dose of vaccine. "7-day average" of people receiving 1 or more doses and the number of people receiving 2 doses are the average of the reported number of people who received their first or second dose of a COVID-19 vaccine administered in the 7 days prior to the date administration data recipient 2) and date of vaccination. Because the method used to determine dose numbers exists for a subset of jurisdictions, the number of people receiving a booster dose is a lower bound estimate of the number of people who have received a booster dose. The "7-day average" of people receiving a booster dose is determined for nearly all reported doses administered but, because there are some missing dates for dose numbers, the count of people receiving 1 or more doses or receiving 2 doses is not shown for the last 7 days, to avoid misleading trends because recent doses numbers reported are likely to be from earlier in the vaccination campaign or might lag behind the count of reporting entities.

Cumulative counts represent the total number of people who have received at least one dose of vaccine, or who have received two doses of a two-dose series, or who have received a single-dose vaccine, since the beginning of the vaccination campaign.

Daily counts represent the number of reported doses administered the number of people receiving 1 or more doses, and the number of people receiving 2 doses by date of vaccine administration. This represents the actual date a person received the vaccine.

Daily change represents reporting the daily change in the cumulative counts reported by CDC for the total number of doses administered in the United States. The daily change is displayed by the date that CDC first reported the total number of doses administered.
