How do your state's trend lines compare to other countries' trends?

View Global COVID Cases and death trends in that map.

View and Download COVID-19 Case Surveillance Public Use Data.

*Data will update as soon as they are reviewed and verified, otherwise below is the current data. If, however, daily updates might be delayed due to delays in reported data.

On 4 February 2021, a state-reported 1,507 new deaths, CDC is working with the state to assess the time period from which these deaths are from. They temporarily impact death totals, which affect the 7-day average.

Data Sources, References & Notes: The case classifications for COVID-19, reported using state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of data from Florida, which is reported to CDC beginning on March 20, 2020 and includes data from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, and probable COVID-19 cases and deaths as reported by U.S. states and cities. Rates are based on 2019 bridged-race population estimates. Totals include probable COVID-19 cases and deaths, if reported. Rates are based on 2019 bridged-race population estimates. Trends show total cases and deaths for the state excluding data for NYC. COVID-19 cases and death data are not available in CDC are reported by the state of residence, regardless of the state in which the death occurred. Deaths are reported to CDC by state of residence. The difference in calculation, quality assurance, and reporting of the cases and deaths between the state and CDC may be reflected in the differences in calculations, quality assurance, and reporting of the cases and deaths between the state and CDC. Deaths are reported by the state. Therefore, the number of historical cases and deaths presented on CDC's website may differ from the state-reported data, and will be reviewed, and revised, as the data from the state are reconciled with the CDC.

The figure and corresponding data table can be modified to show COVID-19 cases and death trends for up to six states or territories. When data exceed all COVID-19 cases and deaths, the rolling average of 7-day cases and deaths will not be displayed. When daily deaths attributed to COVID-19 are displayed, the rolling day is when deaths were first recorded. For both of these measures, the 7-day moving average of new cases or deaths is plotted on the y-axis. Trends in deaths are divided by 10 to calculate to smooth expected variations in daily counts across the index date.

When cumulative cases or deaths of COVID-19 are displayed the index date is when 100 total cases or deaths were first recorded. The trend line shows the cumulative cases or deaths by number of days since the index date.

When daily cases or deaths per 100,000 are displayed, the index date is when 7-day average of cases or deaths per 100,000 people was first recorded. The trend line shows the 7-day moving average of new cases or deaths per 100,000 people using the U.S. Census Bureau's American Community Survey 5-year estimates for the number of people in the index state.

When cumulative case or death rates per 100,000 are displayed, the index date is when 0.5 total cases per 100,000 people was first recorded. The trend line shows the cumulative case or death rate per 100,000 people using the U.S. Census Bureau's American Community Survey 5-year estimates for the number of people in the index state.

*2019 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Puerto Rico, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case numbers are validated through a confirmation process with each jurisdiction. COVID-19 case numbers reported on other websites may differ from what is posted on CDC. COVID-19 Deaths are based on the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be retrospectively updated to reflect the most complete and accurate data available. Cumulative counts of cases and deaths may be reported as decreasing if previous COVID-19 cases and deaths are subsequently determined not to be caused by COVID-19 or were found to be duplicate reports. The case definition for COVID-19 has evolved over time.
