Compare Trends in COVID-19 Cases and Deaths in the US

Reported cases in the CDC to date, by state/territory, and trends are provided by the CDC, updated daily by 8 pm ET.

View: Cases / Deaths
Measure: Cumulative / Per 100,000
Metric: Raw Totals / Rate per 100,000
Scale: Linear / Logarithmic

Select up to 6 states or territories:
California × | Florida × | Georgia × | North Carolina × | New York* × | Texas ×

Show full US data (available only in logarithmic scale).

Cumulative deaths attributed to Covid-19, reported to CDC, in CA, FL, GA, NC, NY, and TX
Cumulative deaths, by number of days since 100 cumulative deaths were reported

View and Download COVID-19 Cases Surveillance Public Use Data

Data will update as soon as they reviewed and verified, referred globally from JT. However, daily updates might be delayed due to delays in reporting.

On 4 February 2021, a state reported 1,307 new deaths. CDC is working with the state to assess the time period from which these deaths occur. This may temporarily impact death counts over the last few days.

Data Sources, References & Notes: The case classifications for COVID-19 is a nationally notifiable disease, are described in the Council of State and Territorial Epidemiologists position statement and adopted by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 surveillance data can be found at https://www.cdc.gov/coronavirus/2019-ncov/cases-updates/index.html.

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons reported to have contracted COVID-19 while traveling on a cruise ship docked in a US port, which are not included. Deaths are based on deaths reported by U.S. territories, New York City (NYC) and the District of Columbia from the National Vital Statistics System. Data for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately. Note: New York State cities and counties are included in the counts for New York State. Cases and death data that are not available to CDC are denoted with an N/A. For aggregate state level data, CDC calculates the rate of cases and deaths per 100,000 using the population estimates from the US Census Bureau, adjusted by the state from the bridge. National rates are not typically calculated for US territories. Population denominators for the number of historical cases and deaths presented on CDC's website reflect the data the data are reported to CDC, and necessarily include the cases and deaths from persons who are not residents.

The figure and corresponding data table can be modified to show COVID-19 case and death trends for up to six states or territories. When data cases of COVID-19 are displayed, the index date is 7 days before the 7-day average daily cases are first recorded. When data deaths are displayed in COVID-19 are displayed, the index day is when 7-average daily deaths were first recorded at 10 cumulative deaths. For example, if 10 deaths are reported on 3/10 and the 7-day average daily deaths rounding up is first calculated as recorded beyond cumulative deaths, the index date is 3/3.

When cumulative cases or deaths COVID-19 are displayed, the index date is when 10 total cases or deaths were first recorded. The trend line shows the cumulative cases or deaths by number of days since the index date.

When daily case or death per 100,000 are displayed, the index date is when 7-day average daily cases or deaths per 100,000 people were first recorded. The trend line shows the 7-day average per 100,000 using the U.S. Census Bureau, 2019 American Community Survey 1-year estimates for the number of days since the index date.

*2019 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Puerto Rico, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case numbers are updated through a confirmation process with each jurisdiction. COVID-19 case numbers reported on other websites may differ from what is posted on CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from jurisdictions may differ from those reported by jurisdictions because CDC's counts include only those that have been confirmed by the jurisdiction and those counts are reported by the jurisdiction's case surveillance system. Trends in COVID-19 case and death data may appear as spikes. The process used for finding and removing duplicate cases and deaths in COVID-19 cases displayed by other sites may differ.
