Compare Trends in COVID-19 Cases and Deaths in the US

Reported to the CDC by the jurisdiction of residence, by the jurisdiction where the death occurred, by the CDC, updated daily by 8 pm ET

View: Cases, Deaths
Measure: Daily, Cumulative
Metric: Raw Totals, Per 100,000
Scale: Linear, Logarithmic

Select up to 5 jurisdictions or territories:

California ×, Florida ×, Georgia ×, North Carolina ×, New York ×, Texas ×

Show full US (Total jurisdictions combined) in logarithmic scale

Total deaths attributed to Covid-19, reported in CA, FL, GA, NC, NY, and TX

Seven-day moving average of new deaths, by number of days since 3 average daily deaths first recorded

*Total will update as cases are reported, but deaths will update only on business days (Mon-Fri). However, daily updates might be delayed due to delays in reported data.

On 4 February 2021, a state reported 1,587 new deaths. CDC is working with the state to assess the time period from which these deaths occur. This may temporarily impact state trend charts, rates and averages.

Data Sources, References & Notes: The case classifications for COVID-19 is actively notifiable disease, are described in the council recommended surveillance case definitions, and are reported to the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. For more information, see the CDC Guidance for Reporting Cases of Suspected Coronavirus Disease 2019 (COVID-19).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States, persons who were diagnosed while aboard a cruise ship, and presumptive positive cases. Data are provisional and subject to change. Some states do not report all data elements on all cases reported in real-time. Data for some previous days or counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately and New York State's counts do not include NYC. Hospital admissions and ICU admissions are a subset of cases, and not all states report these. If a state reported no new cases, no new deaths, or did not report data, CDC assumes the counts of new cases or deaths each day to calculate the difference in cumulative counts reported by the state from the day before. Historical data in charts and tables are regularly updated as data are received from the states. Rates are based on cases and deaths presented on CDC's website reflect the date the data was reported to CDC and are based on 7-day averages (cases/deaths 7-days calculated in relation to population of each state).

The figures and corresponding data tables can be modified to show COVID-19 case and death counts for up to six states at a time. Jurisdictions are listed in alphabetical order, except for the United States, which is always displayed at the top. When data should be included in COVID-19 totals but is displayed in the table but not in the chart, the data is not plotted on the chart for both of these measures. The 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) was calculated to smooth reported variations in daily counts across the entire data.

When cumulative cases or deaths of COVID-19 are displayed, the index date is when 100 total cases or deaths were first recorded. The index date shows the cumulative cases or deaths by number of days since 100 total cases or deaths.

When daily cases or death rates per 100,000 are displayed, the index date is when 20 average daily cases or deaths per 100,000 people was first recorded. The trend line shows the total cases per 100,000 using the U.S. Census Bureau's 2019 Population Community Survey 1 year estimates by the number of days since the index date.

*2019 population estimates are used with the American Samoa, Northern Mariana Islands, Federated States of Micronesia, Guam, New York City, Northern Marianas Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case numbers are updated through a combination automated and manual processes. COVID-19 case numbers reported on other websites may differ from what is posted on CDC's COVID Data Tracker due to timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 cases from previous days may be continually revised as more records are received and processed. Data are provisional and subject to change. Some states do not report all data elements on all cases reported in real-time. Rates based on cases and deaths are updated as rates. The primary used for finding and combining COVID-19 cases displayed by other sets may differ.
