View and Download COVID-19 Case Surveillance Public Use Data

Data will update as soon as they are released and verified. Updated weekdays at 4 PM ET. However, daily updates might be delayed due to delays in reported data.

Data on vaccinations administered to Federal entities, including the Department of Defense, the Department of Veterans Affairs, and the Indian Health Service, are included in the COVID Data Tracker and updated daily between 12 pm and 4:30 pm ET. Updates daily on the following day when reporting is timely.

Daily doses include the total number of doses administered and people receiving doses of vaccine for the United States. We also show doses for the Pfizer and Moderna vaccines, which are administered in two doses, and people who have received one dose of the two-dose vaccines and people who have received two doses. We show doses in people receiving doses by administration date. Either the total count of total doses or people receiving vaccines by administration date, and either the total count of people receiving one dose or people receiving two doses, can be used to calculate the number of people who are in the middle of receiving a two-dose vaccine.

Bars shown in the bar chart represent the daily change from the day before for reporting criteria for the number of administrations reported the respective date or delays in reporting. All reported numbers are aggregated by date of administration.

Doses reported as administered before the official beginning of the national vaccine program on 12/14/2020 (0.0667% of doses) are included in the figures but are not included in the calculation of the 7-day average. Doses administered outside of the 50 states are not included in the CDC COVID Tracker.

Technical notes

Total doses administered are counts of individual COVID-19 vaccine doses administered as reported to CDC by state, territorial, and tribal jurisdictions, and by Federal entities, including those administered to Federal entities' employees.

People receiving 1 or more doses represent the total number of people who have received at least one dose of vaccine. People receiving 2 doses represent the number of people who have also received a second dose of vaccine. †† The number of people receiving 1 or more doses and the number of people receiving 2 doses are based on the date the first dose was administered, regardless of the jurisdiction in which the second dose was administered. Jurisdictions may have different data collection and reporting capabilities that impact their ability to report second doses. Some jurisdictions report only the number of people who have received at least one dose, while others report the number of people who have received a second dose regardless of whether they have received a first dose reported by that jurisdiction. Some jurisdictions report only the number of people who have received a second dose if they also report the date administered for that dose, and others report the number of people who have received a second dose regardless of whether they have reported a date for the first dose. Because of these reporting differences, the number of people who have received a second dose may be greater than the number of people who have received at least one dose in some jurisdictions. Because of these reporting differences, the CDC COVID Data Tracker does not show a second dose given before a first dose.

Daily change reflects the difference between the current and previous reported cumulative totals. Because of reporting delays, daily change may not reflect the number of doses administered on the United States. The 7-day average is calculated by the data team for the respective date on the COVID Data Tracker.

Daily change reported represents the daily change in the cumulative counts reported to the CDC for the total number of doses administered in the United States. The 7-day average is calculated by the data team for the respective date on the COVID Data Tracker.
