View and Download COVID-19 Case Surveillance Public Use Data

Trends will update as soon as they are released and refreshed. Updated every Wednesday at 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data on COVID-19 vaccinations are being collected from jurisdictions across the United States and from federal agencies. Data are updated as soon as possible after receipt from the COVID-19 Data Clearinghouse and published daily between 12 pm and 8 pm ET. Updates delay on the following days: Sunday, Monday, and Tuesday.

Daily dose totals the total number of doses administered and people receiving doses of vaccine for the United States. We also show there for the Pfizer, Moderna, and Janssen (Johnson & Johnson) vaccines the number of doses administered. Because some people have received both doses and some people have received only a dose in one day, the daily number of people receiving doses may be different than the sum of their doses or people receiving vaccines by administration date, and it may be more or less than the number of people who received a vaccine on that day.

Bars shown in the bar chart represent the daily change from the previous day or week to the most recent day for which data are available. Gaps in the bar chart indicate that no data were reported for those dates. Hovering over a bar shows the exact value for that day. Trends are based on the 7-day moving average of the daily data. Trends are not shown during periods with fewer than 5 data points.

Doses reported as administered before the official beginning of the national vaccine program on 12/14/2020 (0.0667% of doses) are included in the figures but are not included in the counts for 7 and 14 days, and they are not included in the cumulative count of doses administered to the CDC (CDC Total).

Definitions:

Total doses administered are counts of individual COVID-19 vaccine doses administered as reported to CDC by date, site, and manufacturer. Pfizer, Moderna, and Janssen (Johnson & Johnson) are the only products currently in use in the US.

People receiving 1 or more doses represents the total number of people who have received at least one dose of vaccine. People receiving 2 doses represents the number of people who have also received a second dose of vaccine. (***The number of people receiving 1 or more doses and the number of people receiving 2 doses are based on the date the vaccine was administered, not the date it was reported to CDC. Because not all vaccination providers report in real time, these numbers may underestimate recent vaccinations.**) Jurisdictions may report vaccinations by date of administration or by date of reporting. Trends in the number of people receiving 1 or more doses and receiving 2 doses may be affected by changes in how jurisdictions report data, or by other factors affecting when people are vaccinated but not reported as vaccinated (for example, the time it takes for second doses to be administered). Trends are also affected by the number of people who are eligible for vaccination, which is not known for most jurisdictions. Trends are also affected by reporting delays for these numbers. We show the number of people receiving 1 or more doses and receiving 2 doses by date of administration, but we do not show when these numbers are reported to CDC. Because of reporting delays, the most recent days' data might be incomplete and appear artificially low. We do not show data for people receiving 1 or more doses or receiving 2 doses by date of reporting.

Data on people receiving a booster dose are based on the number of people who have received a booster dose in addition to their initial series, and the number of people receiving 1 dose by date of vaccine administration from the start of the vaccination program up to the current date.

Data on people who are fully vaccinated (FV) represents the administration date of the second dose of a 2-dose series, and the number of people receiving a dose of a single-dose vaccine 14 days after receiving that vaccine.

Daily change reported represents the daily change in the cumulative counts reported to the CDC for the total number of doses administered in the United States. The daily change is displayed by the date when the CDC has reported the value as CDC Total Doses Administered.
