Terms of Use

Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, data updates might be delayed due to delays in reporting.

Cases and Deaths of December 12, 2020 COVID-19 case and death vectors are generated using a dataset leveraged by the CDC's COVID-19 Response and its various subject matter departments. Individual state-level data are updated with this dataset. To ensure data quality, state data are examined for increases in the distribution of cases, deaths, and other indicators that might suggest a change in how cases, deaths, and other indicators are being reported. Such changes might include, for example, a reporting delay, a backlog of cases being reported all at once, or a change in how cases are being defined. Cases and deaths are date of report and not date of symptom onset. Rates are calculated using 2019 U.S. Census Bureau, 2019 American Community Survey 1-year estimates.

The figure and accompanying table can be modified to show local COVID-19 cases or deaths by county, HHS region, or nationally. In the case of county-level cases and deaths in the last 7 days, two weeks, and cumulative.

Metro vs. Non-Metro classification type is an aggregation of the 6 National Center for Health Statistics (NCHS) Urban-Rural classifications, where "Metro" counties include Large Central Metro, Large Fringe Metro, and Medium/Small Metro counties, and "Non-Metro" counties include Micropolitan and Non-Core counties. Rates are based on 2020 Census Bureau Vintage 2019 Bridged Race Population Estimates. Urban-Rural Classification Scheme for Counties.

Social Vulnerability Index (SVI) ranks, which range from 0 to 1, are from CDC/ATSDR's Geospatial Research, Analysis & Services Program. SVI scores for U.S. counties were generated based on settlement and categorized as low (0.0-0.33), medium (0.34-0.66), or high (0.67-1.0).
