Looking for data on birth and infant outcomes among pregnant women with COVID-19?

Visit CDC's Birth and Infant Outcomes data page for information on delivery type, preterm birth, and infant outcomes.

Pregnant Women: with COVID-19, United States, January 22, 2020 - December 27, 2021

TOTAL CASES*

153,965

TOTAL DEATHS

257

Cases of COVID-19 among Pregnant Women by Week of Diagnosis*

Data were collected from 153,965 women and date of diagnosis** was available for 153,965 (100%) women.

Download Chart

*Jurisdictions may take 2-4 weeks to confirm a case of SARS-CoV-2 in a pregnant woman and report it to CDC.

**Date of diagnosis is derived from the earliest date of either 1) when the case report was received by CDC or 2) a hospitalization/death occurred or 2) the earliest available date related to the illness or specimen collection.

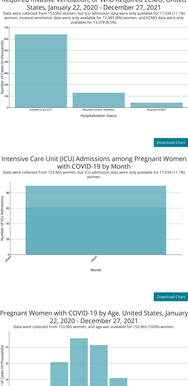
Deaths* among Pregnant Women with COVID-19 by Month**



Download Chart

*Deaths reported by jurisdictional health departments reflect the most up-to-date information received by CDC based on preliminary reporting using the case report. Date of death is used for reporting, and if unknown, date of report is used. Delays may exist in reporting of deaths from initial confirmation of SARS-CoV-2 infection.

** In July 2021, the Data variant of SARS-CoV-2 became the predominant variant in the United States.

Pregnant Women with COVID-19 Who Were Hospitalized, United States, January 22, 2020 - December 27, 2021

Data were collected from 153,965 women, but hospitalizations were available for 126,537 (82%)

HOSPITALIZED CASES*

25,923

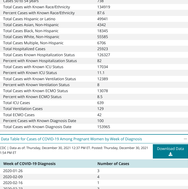
Pregnant Women with COVID-19 Admitted to the ICU, Who Required Invasive Ventilation, or Who Required ECMO, United States, January 22, 2020 - December 27, 2021

Data were collected from 153,965 women, but admissions were available for 17,034 (11%) women, invasive ventilation data were only available for 12,389 (8% women), and ECMO data were only available for 15,078 (9.3%).

Download Chart

Intensive Care Unit (ICU) Admissions among Pregnant Women with COVID-19 by Month

Data were collected from 153,965 women, but ICU admission data were only available for 17,034 (11.1%) women.



Download Chart

Pregnant Women with COVID-19 by Age, United States, January 22, 2020 - December 27, 2021

Data were collected from 153,965 women and age was available for 153,965 (100%) women.

Download Chart

Pregnant Women with COVID-19 by Race/Ethnicity, United States, January 22, 2020 - December 27, 2021

Data were collected from 153,965 women, but race/ethnicity was only available for 114,919 (81.6%) women.

Download Chart

*Cases with age, known and not pregnant, and known and not pregnant.
**Other race includes non-Hispanic American Indian/Alaska Native or Native Hawaiian or Other Pacific Islander.
Data are provisional and subject to change. Cases among persons with unknown pregnancy status are not included.
Hispanic persons include persons of any race.
*Hospitalization, ICU, Intensive care unit, ECMO, extracorporeal membrane oxygenation, or advanced life support technique used for patients with life threatening lung or heart organ failure.

2021	December	5	21

Footnotes

* This campaign is updated weekly. The cases reported include only confirmed cases with laboratory evidence of SARS-CoV-2 infection.

About the Data

All data on this page come from the Nationwide Enhanced Pregnancy COVID-19 Passive Surveillance Case Report Form. There are currently 54 U.S. jurisdictions participating in this surveillance system, including 50 states, the District of Columbia, Puerto Rico, and the U.S. Virgin Islands. Data are updated weekly on Thursdays. Data are based on Case Report Forms. Data include information on ongoing cases. Therefore, these data are subject to change as more information is received and cases are followed over time. Data are provisional and subject to change. Cases among persons with unknown pregnancy status are not included. Cases among persons of unknown age are included in the overall number of cases in pregnant women with COVID-19 but are not included in any age-specific analyses. Cases among persons of unknown race and ethnicity are included in the overall number of cases in pregnant women with COVID-19 but are not included in any race/ethnicity-specific analyses. Hospitalization data are based on cases with a positive COVID-19 test and a pregnancy status of "pregnant" or "unknown." Different numbers regarding publications and CDC's website may occur due to different inclusion criteria and different analytic approaches. The process used for finding and reporting cases of COVID-19 in pregnancy is described in the MMWR Vital Signs: Characteristics of Women of Reproductive Age with Laboratory-Confirmed SARS-CoV-2 Infection by Pregnancy Status.

Beginning in March 2020, CDC has received reports of cases of COVID-19 among pregnant women who are younger than age 15 and older than age 54 (based on date of birth and date of diagnosis). Based on review of data quality, cases reported as pregnant with ages younger than 15 or older than 54 are less likely to be accurate than those reported for other ages. Cases with these ages are included in the overall number of cases.

For more information on how CDC collects COVID-19 data, visit https://covid.cdc.gov/covid-data-tracker/#about-data.

For information on the multiple efforts CDC is supporting to collect more data on COVID-19 in pregnant women and infants, see https://www.cdc.gov/coronavirus/2019-ncov/hcp/pregnancy/index.html.

For surveillance data on birth and infant outcomes from the Surveillance for Emerging Threats to Mothers and Babies Network (SET-NET) see COVID-19 Data for Pregnancy, Birth and Infant Surveillance.
