Wastewater Surveillance

COVID-19: Wastewater Surveillance

Coronavirus disease 2019 (COVID-19) is a highly developing field. State, tribal, local, and territorial health departments participate in the National Wastewater Surveillance System (NWSS) submit testing data to CDC. CDC then standardizes and interprets these data and presents them in the COVID Data Tracker. How wastewater data are interpreted and used will frequently data are reported to CDC and by health department.

Wastewater data are meant to be used with other COVID-19 surveillance data to better understand the spread of the virus in communities. Learn more about wastewater data by exploring each of the charts and maps. To see a map of which SARS-CoV-2 variants in the wastewater at each wastewater sampling site, see Cov-Spectrum - Variants in Wastewater Surveillance.

View information about the data and download the data.

Monitoring Wastewater Surveillance Data

Wastewater surveillance for COVID-19 is a rapidly developing field. State, tribal, local, and territorial health departments participate in the National Wastewater Surveillance System (NWSS) submit testing data to CDC. CDC then standardizes and interprets these data and presents them in the COVID Data Tracker. How wastewater data are interpreted and used will frequently data are reported to CDC and by health department.

Wastewater data are meant to be used with other COVID-19 surveillance data to better understand the spread of the virus in communities. Learn more about wastewater data by exploring each of the charts and maps. To see a map of which SARS-CoV-2 variants in the wastewater at each wastewater sampling site, see Cov-Spectrum - Variants in Wastewater Surveillance.

Wastewater Metric Chart

This chart shows how much virus levels have changed (increased and decreased) over time at wastewater sites across the United States. It shows the percent of sites in each category of change over time, for the last 15 days and the percent of sites with available data.

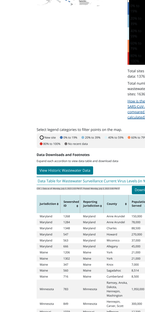
The percent change metric shows whether virus levels have increased or decreased at sites over the last 15 days:

- Blue categories (Large decrease (-100%), Decrease (-99% to -10%)): Virus levels decreased at those sites in the last 15 days
- Yellow category (Stable (-9% to 9%)): Virus levels stayed about the same at those sites in the last 15 days
- Orange and red categories (Increase (10% to 99%), Large increase (100% or more)): Virus levels increased at those sites in the last 15 days.

The chart shows the number and percent of sites that were in each category over time since January 1, 2021. If more area on the chart is shaded light or dark blue, it means virus levels were decreasing at more sites at that point in time. If more area on the chart is shaded red or orange, it means virus levels were increasing at more sites at that point in time. Changes in virus levels over the last 15 days metric may be affected by how many wastewater plants started collecting wastewater samples, the black line shows the number of sampling sites with available data for each date.

Note: This chart does not show overall levels of SARS-CoV-2 in wastewater.

Percent of sites in each percent change category over time, United States*



*The darker bar on the right side of the figure highlights the most recent 2 weeks, which may be subject to reporting delays. The actual number of sites reporting during these 2 weeks will likely increase as historical data are added.

Wastewater Metric Map

State or territory: Select state or territory ▾
County: Select county/counties by state ▾
Reset Selections

Time Period: Jun 12, 2023 – Jun 26, 2023

Weekly:
- Percent change in virus levels in wastewater by site
- Percent change in the last 15 days
- Percent of wastewater samples with detectable virus

Other:
- Sites with no recent data
- Sites that started sampling after 12/1/21

Current virus levels in wastewater by site
This metric shows whether SARS-CoV-2 levels at a site are currently higher or lower than past historical levels at the same site. We assess current levels using the last 15 days of data. Sites with current levels in the highest three tertiles are at the site. Public Health Officials may see increasing levels of the virus in wastewater over time and use these data to help make public health decisions.

Note: Sites began collecting data at different times. Sites that began collecting data more recently may be in the lowest tertile because they have not yet collected reporting data or are before October 1, 2021. The data history for these new sites is not long enough to reflect the same surges as the other sites.

Select tagged categories to filter points on the map.

New site | 75% to 100% | 25.0% to 75% | 10% to 25% | 0.0% to 10%
-50% to -100% | Insufficient data
