Footnotes

Data for the previous MMWR week (Sunday-Saturday) will update weekly on Fridays as soon as they are reviewed and verified, usually before 8 p.m. Eastern Time. Data for the most recent two weeks are preliminary and may be updated. Data for the last 7 days are not included because they are incomplete. Data for the last 3 days are not included because they are incomplete. Data for the most recent week are based on a partial week of reporting and reporting delays. All data are preliminary.

Weekly COVID-19 Hospital Admissions and Deaths data reporting has been discontinued with the end of the Public Health Emergency (PHE) on May 11, 2023. These data have been archived at data.cdc.gov. For death data, CDC has transitioned to displaying provisional COVID-19 deaths reported to National Vital Statistics System (NVSS) rather than those reported to the National Healthcare Safety Network (NHSN). For more information, please see the Transition Notice for COVID-19 Hospitalization Data and the Transition Notice for COVID-19 Deaths Data. Data on COVID-19 deaths reported to CDC's Division of Vital Statistics (DVS) are posted on CDC's Data Tracker. See Data Sources for COVID-19 Deaths for more information.

Data for Current Season (MMWR Week 40 to Present) Number of new influenza-associated pediatric deaths by week of occurrence: https://www.cdc.gov/flu-weekly/pediatric-mortality.html

Hospitalizations Data

- **Source:** COVID-19-associated hospitalization data reported to CDC's National Healthcare Safety Network (NHSN).
- **COVID-19 New Hospital Admissions:** Total hospital admissions by all patients with laboratory-confirmed COVID-19 to inpatient beds in healthcare system sites, capacity, and community disease levels for approximately 6,000 hospitals in the United States. Data reported by healthcare facilities are assigned to the facility's county based on the facility's address. Data are shown by the date of admission to hospital, hospitalizations, and transfers. The hospital change does not impact trends in hospitalizations. The COVID-19 hospitalization trend data are directly tied to the U.S. Department of Health and Human Services (HHS) so as a state submission for collection in the HHS Unified Hospital Data Reporting system changes, the trend data will reflect that change. Data are updated weekly.
- **COVID-19 New Hospital Admissions per 100,000:** The COVID-19 hospital admissions per 100,000 population are calculated using the most recent 7-day average of COVID-19 hospital admissions and the 2019 Census population estimates for the entire geographic area. Rates are rounded to the nearest tenth. Rates for Hispanic, Asian, American Indian/Alaska Native, and Native Hawaiian/Other Pacific Islander are not reported if the denominator is less than 10,000.
- **Percent of Inpatient Beds Occupied:** Number of inpatient beds occupied by all patients regardless of the source of payment multiplied by 100 and divided by the total number of staffed inpatient beds. This includes all acute care, critical access, and children's hospitals in the United States, excluding Department of Veterans Affairs (VA) hospitals and military facilities. The percentage of inpatient beds occupied by COVID-19 patients is defined by incomplete reporting in recent weeks and may underestimate the percentage of beds occupied by COVID-19 patients.
- **COVID-19 Inpatient Bed Occupied:** Number of staffed inpatient beds occupied by laboratory-confirmed COVID-19 patients. Data are updated weekly. Beginning with data reported on January 8, 2021, the number of COVID-19 patients reported includes patients with both confirmed and suspected COVID-19. Prior to that date, only confirmed COVID-19 patients were included. Data are shown by the date the patient was admitted to the hospital.

For all metrics, if there are no data for the specified facility of a given week, the metric value is displayed as "Insufficient data".

Death Data

- **Source:** Provisional Deaths from the CDC's National Center for Health Statistics (NCHS) National Vital Statistics System (NVSS).
- **COVID-19 Deaths:** Number of deaths resulting from a positive COVID-19 virus test, presumed COVID-19 infection, or clinical diagnosis of COVID-19 ICD-10 codes U07.1 or underlying cause of death U07.0 reported in death certificates. Death data are displayed by date of death (occurrence). This is a change from the surveillance data used previously in CDC Data Tracker which were displayed by date of report (submission). Due to the lag in time between when a death occurs and when a death certificate is filed and processed, the most recent dates have the lowest number of deaths due to COVID-19 and these numbers are expected to increase. Death counts in the most recent weeks are incomplete and are not included in this report.
- **Deaths Data:** Due to the incomplete because of the lag in time between when a death occurs and when a death certificate is completed, submitted to the National Center for Health Statistics, they may not be representative of all deaths for the most recent weeks. Death counts in the most recent weeks are incomplete and are not included in this report. Death counts in the most recent weeks are based on a partial week of reporting and reporting delays. All data are preliminary.
- **Deaths Data in Footnotes:** Total number of deaths reported in the specified geographic area and reported with laboratory-confirmed COVID-19 in the past week including both death with and without a laboratory-confirmed COVID-19 test. The percentage of COVID-19 deaths is defined by incomplete reporting in recent weeks and may underestimate the percentage of deaths due to COVID-19.
- **COVID-19 Deaths per 100,000:** The COVID-19 deaths per 100,000 population are calculated using the most recent 7-day average of COVID-19 deaths and the 2019 Census population estimates for the entire geographic area. Rates are rounded to the nearest tenth. Rates for Hispanic, Asian, American Indian/Alaska Native, and Native Hawaiian/Other Pacific Islander are not reported if the denominator is less than 10,000.
- **Cumulative COVID-19 Hospitalizations:** The total number of new admissions of patients with laboratory-confirmed COVID-19 since reporting began in the COVID-19 Response on July 1, 2020. Data are updated weekly.
- **COVID-19 Inpatient Bed Occupied Trend:** Trend in the number of inpatient beds occupied by patients with laboratory-confirmed COVID-19 in the past week including both and without a laboratory-confirmed COVID-19 test. The percentage of COVID-19 hospitalizations is defined by incomplete reporting in recent weeks and may underestimate the percentage of beds occupied by COVID-19 patients.

For all metrics, if there are no data for the specified facility of a given week, the metric value is displayed as "Insufficient data".

Test Data

- **Source:** Provisional Deaths from the CDC's National Center for Health Statistics (NCHS) National Vital Statistics System (NVSS).
- **Percent Positive:** The percent of all reported COVID-19 tests that were positive. Data are based on the date the specimen was collected for COVID-19 RT-PCR or an antigen-based test. Data are shown by the date the specimen was collected. Data are updated weekly.
- **Percent Positive in Footnotes:** The percent of all reported COVID-19 tests that were positive. Data are based on the date the specimen was collected. This is a change from the surveillance data used previously in CDC Data Tracker which were displayed by date of report (submission). Due to the lag in time between when a test is performed and when a test result is filed and processed, the most recent dates have the lowest number of tests and these numbers are expected to increase. Test counts in the most recent weeks are incomplete and are not included in this report.
- **Test Data:** Due to the incomplete because of the lag in time between when a test occurs and when a death certificate is completed, submitted to the National Center for Health Statistics, they may not be representative of all tests for the most recent weeks. Test counts in the most recent weeks are incomplete and are not included in this report.
- **Cumulative Number of Tests Performed:** The total number of reported COVID-19 RT-PCR or antigen-based tests. Data are updated weekly.

Data are from the COVID-19 Response. Data are preliminary and may be updated. Data are shown by the date the specimen was collected. Data are updated weekly.

Definitions

- **Sources:** COVID-19-associated hospitalization data reported to CDC's National Healthcare Safety Network (NHSN).
- **COVID-19 New Hospital Admissions per 100,000:** The COVID-19 hospital admissions per 100,000 population are calculated using the most recent 7-day average of COVID-19 hospital admissions and the 2019 Census population estimates for the entire geographic area. Rates are rounded to the nearest tenth. Rates for Hispanic, Asian, American Indian/Alaska Native, and Native Hawaiian/Other Pacific Islander are not reported if the denominator is less than 10,000.
- **Percent of Inpatient Beds Occupied:** Number of inpatient beds occupied by all patients regardless of the source of payment multiplied by 100 and divided by the total number of staffed inpatient beds. This includes all acute care, critical access, and children's hospitals in the United States, excluding Department of Veterans Affairs (VA) hospitals and military facilities. The percentage of inpatient beds occupied by COVID-19 patients is defined by incomplete reporting in recent weeks and may underestimate the percentage of beds occupied by COVID-19 patients.
- **COVID-19 Inpatient Bed Occupied:** Number of staffed inpatient beds occupied by laboratory-confirmed COVID-19 patients. Data are updated weekly. Beginning with data reported on January 8, 2021, the number of COVID-19 patients reported includes patients with both confirmed and suspected COVID-19. Prior to that date, only confirmed COVID-19 patients were included. Data are shown by the date the patient was admitted to the hospital.
- **Cumulative COVID-19 Hospitalizations:** The total number of new admissions of patients with laboratory-confirmed COVID-19 since reporting began in the COVID-19 Response on July 1, 2020. Data are updated weekly.
- **COVID-19 Inpatient Bed Occupied Trend:** Trend in the number of inpatient beds occupied by patients with laboratory-confirmed COVID-19 in the past week including both and without a laboratory-confirmed COVID-19 test. The percentage of COVID-19 hospitalizations is defined by incomplete reporting in recent weeks and may underestimate the percentage of beds occupied by COVID-19 patients.

Death Data

- **Source:** Provisional Deaths from the CDC's National Center for Health Statistics (NCHS) National Vital Statistics System (NVSS).
- **COVID-19 Deaths:** Number of deaths resulting from a positive COVID-19 virus test, presumed COVID-19 infection, or clinical diagnosis of COVID-19 ICD-10 codes U07.1 or underlying cause of death U07.0 reported in death certificates. Death data are displayed by date of death (occurrence). This is a change from the surveillance data used previously in CDC Data Tracker which were displayed by date of report (submission). Due to the lag in time between when a death occurs and when a death certificate is filed and processed, the most recent dates have the lowest number of deaths due to COVID-19 and these numbers are expected to increase. Death counts in the most recent weeks are incomplete and are not included in this report.
- **Deaths Data:** Due to the incomplete because of the lag in time between when a death occurs and when a death certificate is completed, submitted to the National Center for Health Statistics, they may not be representative of all deaths for the most recent weeks. Death counts in the most recent weeks are incomplete and are not included in this report.
- **Deaths Data in Footnotes:** Total number of deaths reported in the specified geographic area and reported with laboratory-confirmed COVID-19 in the past week including both death with and without a laboratory-confirmed COVID-19 test. The percentage of COVID-19 deaths is defined by incomplete reporting in recent weeks and may underestimate the percentage of deaths due to COVID-19.
- **COVID-19 Deaths per 100,000:** The COVID-19 deaths per 100,000 population are calculated using the most recent 7-day average of COVID-19 deaths and the 2019 Census population estimates for the entire geographic area. Rates are rounded to the nearest tenth. Rates for Hispanic, Asian, American Indian/Alaska Native, and Native Hawaiian/Other Pacific Islander are not reported if the denominator is less than 10,000.

Test Data

- **Source:** Provisional Deaths from the CDC's National Center for Health Statistics (NCHS) National Vital Statistics System (NVSS).
- **Percent Positive:** The percent of all reported COVID-19 tests that were positive. Data are based on the date the specimen was collected for COVID-19 RT-PCR or an antigen-based test. Data are shown by the date the specimen was collected. Data are updated weekly.
- **Percent Positive in Footnotes:** The percent of all reported COVID-19 tests that were positive. Data are based on the date the specimen was collected. This is a change from the surveillance data used previously in CDC Data Tracker which were displayed by date of report (submission). Due to the lag in time between when a test is performed and when a test result is filed and processed, the most recent dates have the lowest number of tests and these numbers are expected to increase. Test counts in the most recent weeks are incomplete and are not included in this report.
- **Test Data:** Due to the incomplete because of the lag in time between when a test occurs and when a death certificate is completed, submitted to the National Center for Health Statistics, they may not be representative of all tests for the most recent weeks. Test counts in the most recent weeks are incomplete and are not included in this report.
- **Cumulative Number of Tests Performed:** The total number of reported COVID-19 RT-PCR or antigen-based tests. Data are updated weekly.

Data are from the COVID-19 Response. Data are preliminary and may be updated. Data are shown by the date the specimen was collected. Data are updated weekly.

Notes

- Data for Hispanic, Asian, American Indian/Alaska Native, and Native Hawaiian/Other Pacific Islander are not reported if the denominator is less than 10,000.
- Rates are rounded to the nearest tenth.
- Data are from the National Respiratory and Enteric Virus Surveillance System (NREVSS), which includes reverse transcriptase-polymerase chain reaction (RT-PCR) tests from a sentinel network of NREVSS reporting laboratories in the United States, including clinical, public health and commercial laboratories. Laboratories report the number of specimens tested and the number of specimens that test positive for each virus tested. Test positivity data are only available at the national and HHS Region level.
- All data are provisional and subject to change. Reporting is less complete for the past 1 week, and more complete for dates earlier than the past 1 week.
- Because the dates are based on laboratory specimen collection dates, results may vary geographically. The dates do not indicate all tests before a particular and therefore may not reflect all COVID-19 tests in the United States. There are data from all 50 states, including the District of Columbia, Puerto Rico, and the U.S. Virgin Islands. Not all states report data to the NREVSS system every week. Data from Guam are reported as part of HHS Region 2. Data from other U.S. territories are not reported to NREVSS.
- Data for the most recent weeks are incomplete because they do not include data from laboratories that report less than weekly or those that are testing the number of positive RNA by the total number of RNA specimens, then multiplying by 100 (8 of positive RNA / total 10 RNA specimens = 80%).
- The data represent laboratory tests performed, not individual people. In the last week and lagging on the map, the test data counts in the data reflect the latest reported data from NREVSS laboratories and may not match the data presented by various jurisdictions.
- Data for Guam, Puerto Rico, and the U.S. Virgin Islands are not available for laboratory reporting (PCR platform) or the primary laboratory source of data (Quest) for the time frame are shaded in Quest.
- For more information on NREVSS, please see https://www.cdc.gov/surveillance/nrevss/index.html.
- For more information on the COVID-19 Response, please see https://www.cdc.gov/coronavirus/2019-ncov/index.html.
- For more information on the Hospital Data on the NCHS website: https://www.cdc.gov/nchs/covid19/hospital-utilization.htm
- For downloading the NREVSS data, please go to the FluView Interactive: https://gis.cdc.gov/grasp/fluview/fluviewinteractive.html

Emergency Department Visits

- **Source:** Emergency Department (ED) visits from the National Syndromic Surveillance Program (NSSP).
- NSSP is a collaboration among CDC, state and jurisdictional health departments, and academic and private sector partners to collect, analyze, and share electronic patient encounter data received from multiple health care settings. For mapping into COVID-19 trends, CDC uses a subset of NSSP data from hospital emergency departments (EDs) that have reported at least 10 COVID-19 visits in the current, 2-week, and 1-year reporting periods. https://www.cdc.gov/nssp/preparedness/index.html
- The percentage of ED visits for patients with a discharge diagnosis of COVID-19 is calculated nationally, regionally, and for each state and jurisdiction using the most recent 7-day average of COVID-19 ED visits and the total ED visits.
- Data are from the National Syndromic Surveillance Program (NSSP). Data are preliminary and may be updated. Data are shown by the date of patient visit. Data are updated weekly.
- Because the dates are based on laboratory specimen collection dates, results may vary geographically. The dates do not indicate all tests before a particular and therefore may not reflect all COVID-19 tests in the United States. There are data from all 50 states, including the District of Columbia, Puerto Rico, and the U.S. Virgin Islands. Not all states report data to the NSSP system every week. Data from Guam are reported as part of HHS Region 2. Data from other U.S. territories are not reported to NSSP.
- Data for the most recent weeks are incomplete because they do not include data from EDs that report less than weekly or those that are testing the number of positive RNA by the total number of RNA specimens, then multiplying by 100 (8 of positive RNA / total 10 RNA specimens = 80%).
- The percentage of ED visits for patients with a discharge diagnosis of COVID-19 may underestimate the burden of COVID-19 in the United States because not all EDs are reporting and because not all COVID-19 patients are expected to be diagnosed and receive a discharge diagnosis in the ED.
- For more information on NSSP, please see https://www.cdc.gov/nssp/index.html.
- For more information on the COVID-19 Response, please see https://www.cdc.gov/coronavirus/2019-ncov/index.html.
