Footnotes

Data for the previous **SEVEN** week (Sunday-Saturday) will update weekly on Friday as soon as they are reviewed and verified, usually before 8 pm ET. Updated data will be throughout Sunday-Saturday but when reporting concludes with a finalized Friday. Newly updated, eligible for dropped data will be added to the previous week's data. Data for the most recent week will be incomplete because it takes 3 weeks for all data to be received and processed for reporting. Weekly data will be updated on Fridays.

Photo credit: Aggregate COVID-19 case and death data reporting has been discontinued with the end of the Public Health Emergency (PHE) on May 11, 2023. Data on COVID-19 cases, deaths, and hospitalizations reported through the National Healthcare Safety Network (NHSN) are now posted to the CDC COVID Data Tracker website. Data on COVID-19 testing and vaccinations continue to be reported to CDC by jurisdictions and are posted to the Tracker. Data on COVID-19 cases and deaths reported through the National Notifiable Diseases Surveillance System (NNDSS) are being made ready for the maps at the national and regional levels. Data on COVID-19 hospitalizations from the National Healthcare Safety Network (NHSN) are being made available on the Tracker. Data on COVID-19 testing and vaccinations will continue to be updated.

Health and Human Services (HHS) regions: Per Jan 21st, 2021, Department of HHS regions are defined here:
https://www.hhs.gov/about/agencies/iea/regional-offices/index.html

Hospitalization Data

Source: COVID-19 associated hospitalization data reported to CDC's National Healthcare Safety Network (NHSN). Hospitals report COVID-19 hospitalization data to their state or territorial health department, who then reports to the National Healthcare Safety Network. Data on hospitalizations and critical beds in healthcare system, clinic, capacity, and emergency and trauma care are reported by facilities to the United States. Data reported by facilities in the United States, Puerto Rico, and the United States Virgin Islands. Data are reported by state or territory health departments to the CDC. Data are aggregated by state, territory, and nation. Data are reported by facilities in the United States, Puerto Rico, and the United States Virgin Islands. Data are reported by state or territory health departments to the CDC. Data are aggregated by state, territory, and nation.
While CDC release data for states and territories those found using national charts might slow within the data. To minimize the burden on reporting facilities, CDC has provided hospitals with the ability to report data on weekends or holidays if they choose to. Hospitals can report data for any 24-hour period they choose as long as they do not report more than once per calendar day. Data from Veterans Health Administration hospitals, Department of Defense hospitals, Indian Health Service hospitals, and included in the metric calculations of Report COVID-19 Hospital, Inpatient, Ventilation, and Intensive Care Unit Capacity are included in the COVID-19 Hospitalization Data.
Hospitals are required to report COVID-19 hospitalization data for the previous calendar day. Hospitals have 7 days to report data to the NHSN. In some cases, the Ministry of Columbia introduced a HHS Region 3, Alternative Series (HHS Region 3A), the Commonwealth of Northern Mariana Islands (CNMI) and Guam are in HHS Region 9, and the Virgin Islands are in HHS Region 2. Data for the Virgin Islands and Guam are presented as a region in the charts and in the downloaded data.
Hospitalization data is reported to the CDC by jurisdiction, which may differ from state or territory. Definition for Hospital Inpatient and Hospital Inpatient Adult and Pediatric COVID-19 Patients: https://www.cdc.gov/nhsn/pdf/covid19/commissioning-covid-vaccination-covid-19-collecting-reporting-inpatient-hospital-admissions-v2.pdf#page=4&zoom=100,0,0
Hospital Inpatient Adult and Pediatric COVID-19 Patients: https://www.cdc.gov/nhsn/pdf/covid19/commissioning-covid-vaccination-covid-19-collecting-reporting-inpatient-hospital-admissions-v2.pdf#page=4&zoom=100,0,0
Although the capacity is reported in adult and pediatric inpatient beds, COVID-19 patients are reported in the adult inpatient beds. Additionally, analyses of these data at the local level are complicated by unequal distribution of hospitals within regions, as they are often concentrated in metropolitan areas. Regional and national data are weighted to account for this unequal distribution.
Hospitalization data is reported to the CDC by hospitals, which may differ from state or territory. Hospitals are required to report data to NHSN as defined by CMS's Hospital Service for Health Statistics as a geography area covering a town county which is self-contained with respect to the hospitals and healthcare facilities that provide services to residents of the county. Data are reported by facilities in the United States, Puerto Rico, and the United States Virgin Islands. Data are reported by state or territory health departments to the CDC. Data are aggregated by state, territory, and nation.
Data presented at the county level represent adult, pediatric, hospital inpatient and ED level capacity and occupancy among hospitals within the county. Hospitals are assigned to counties based on the county in which the hospital is located.
Hospitals are required to report data for the previous calendar day. Hospitals have 7 days to report data to the NHSN. Data are reported by state and territory health departments.
Hospitals reporting data to the NHSN reported COVID-19 past week: Total number of admissions of patients with laboratory-confirmed COVID-19 that were reported as "Yes" or "Not available" in the COVID-19 Hospital Admissions Level data reported on October 27th, 2021.
Total number of admissions of patients with laboratory-confirmed COVID-19 that were reported as "Yes" or "Not available" in the COVID-19 Hospital Admissions Level data reported on October 27th, 2021.

- **Data Notes:**
  - September 29th, 2021: Hospitalization data reported to CDC's National Healthcare Safety Network (NHSN) through December 31st, 2020 included data from Veterans Health Administration (VHA) hospitals and Department of Defense (DoD) hospitals. Beginning in Today, as a result, metrics including new hospitalized patients for COVID-19 and influenza and hospital occupancy may be higher than previously reported.
  - December 29th, 2021: Beginning with the December 29th, 2021 update, the Hospitalization Data will be updated on Wednesdays and Fridays. Updates to previous data will be made on Wednesdays. Updates to the Hospitalization Data in the COVID Data Tracker Admissions Level could not be calculated for CMAS and will be reported as "NA" or "Not Available" in the COVID-19 Hospital Admissions Level data released on December 29th, 2021.
  - December 29th, 2021: Beginning with the December 29th, 2021 update, the Hospitalization Data will be updated on Wednesdays and Fridays. Updates to previous data will be made on Wednesdays. Updates to the COVID-19 Hospital Admissions Level data
