# COVID Data Tracker

Maps, charts, and data provided by CDC, updates Monday, and Friday by 8 p.m. ET

COVID Data Tracker will close on Friday, November 15, 2023. Regular updates will resume on Monday, November 13.

Note: As of September 13, 2023, testing data is temporarily unavailable from about 400 wastewater testing sites because the vendor is currently being implemented, and testing and reporting for different sites is expected to resume shortly.

**United States at a Glance**

Wastewater Surveillance

## Wastewater Surveillance

# COVID-19: Wastewater Surveillance

Communities can track the presence of SARS-CoV-2, the virus that causes COVID-19, in wastewater samples. These data can provide an early warning of COVID-19 spread in communities. For more information, visit the Wastewater Surveillance home page.

### Monitoring Wastewater Surveillance Data

Wastewater surveillance for COVID-19 is a rapidly developing field. State, tribal, local, and territorial health departments participating in the National Wastewater Surveillance System (NWSS) submit testing data to CDC. CDC then standardizes and interprets these data and presents them in the COVID Data Tracker. CDC is working with wastewater samplers and how frequently data are reported to CDC serve as the baseline.

Wastewater data are meant to be used with other COVID-19 surveillance data to better understand COVID-19 spread in a community. Learn more about wastewater data by exploring each of the charts and maps. To see a map of which SARS-CoV-2 variant is the most dominant at each wastewater sampling site, see CDC COVID Data Tracker Summary of Variant Surveillance.

## Wastewater Metric Chart

This chart shows how much virus levels have changed (increased and decreased) over time at wastewater sites where samples are collected. The percent change in amount of virus in each sample is then compared to each site's baseline data among all sites with available data.

The percent change in SARS-CoV-2 virus levels have increased or decreased at sites over the last 15 days.

- Four categories (Large decrease (-100%), Decrease (-99% to -10%), Increase (10% to 99%), Large increase (100%)) show how virus levels changed about the same at these sites in the last 15 days.
- Orange and red categories (Increase (10% to 99%), Large increase (100%)) show virus levels increased at these sites in the last 15 days.

Bars show the overall percent of sites that were in each category over time since January 1, 2021. If more area on the chart is shaded light or dark blue, it means virus levels were decreasing at more sites at those times. If more area is shaded orange or red, it means virus levels were increasing at more sites at those times. Hover over the chart to see the exact percentages for the last 15 days. Sites may be affected by how many wastewater plants were collected for wastewater samples. We hide bars that show the number of sampling sites with available data for each date.

Note: This chart **does not** show overall levels of SARS-CoV-2 in wastewater.
