View and Download COVID-19 Case Surveillance Public Use Data

Data Sources, References & Notes: Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons reported to the United States from Wuhan, China, and Japan. The numbers are confirmed and probable COVID-19 cases as reported by U.S. states, Puerto Rico, New York City, and the District of Columbia from the previous day. *Counts for New York City and New York state are shown separately data for New York State show total cases and deaths for the State excluding data for NYC. When not available to CDC this is annotated by N/A. Rates are calculated using U.S. Census Bureau Population Estimates Vintage 2019 Annual Community Survey 1-year estimates and are shown as cases/100,000 people. The map shows total cases per county over the last 7 days per state, and the rate (cases/100,000) per state. The 7-day moving average of new cases (current day + 3 preceding days / 7 lines calculated ending on the current day) is shown in the trend chart. Data on deaths and cases are updated Monday-Friday by 12:00 PM ET, as collected from state and local health departments. Updates may differ from what is posted on CDC's website because CDC's overall case numbers are updated through a continuous process with each jurisdiction. Differences between reporting jurisdictions and CDC's website may occur due to the mixing of reporting and website updates. The process used for finding and confirming cases displayed by other sites may differ.
