View and Download COVID-19 Case Surveillance Public Use Data

Data Sources, References & Notes: Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020. Cases include probable cases reported to the United States from Wuhan, China, and Japan. The number of confirmed and probable COVID-19 cases as reported by U.S. states, U.S. territories, New York City, and the District of Columbia from the previous day. *Counts for New York City and New York state are shown separately, due to New York state reporting cases from New York City as well as other counties in the state. When no cases are reported for a state or territory, the cases are shown as 0. Rate per 100,000 is calculated using the population from the 2019 Census estimates for the 50 states, the District of Columbia, and Puerto Rico, and the 2010 Census estimate for the US Virgin Islands. Rate per 100,000 is not shown for Guam, and the Northern Mariana Islands because their populations are less than 100,000 and rate. The 7-day moving average of new cases (current day + 6 preceding days) ("7-day calculation") smooths unexpected variations in daily counts. Demographic data for deaths is based on a subset of cases where case level data is available. Case numbers reported on other websites may differ from what is posted on CDC's website because CDC's overall case numbers are validated through a confirmation process and de-duplication. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The process used for finding and confirming cases displayed by other sites may differ.
