View and Download COVID-19 Case Surveillance Public Use Data

Data Sources, References & Notes: Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020. Cases are reported to the United States from Wuhan, China, and Japan. The numbers are confirmed and probable COVID-19 cases as reported by U.S. states, U.S. territories, New York City, and the territory of Columbia from the previous day. *Counts for New York City and New York state are shown separately, due to New York State show total cases and deaths for the State excluding data for NYC. When no data are reported, the cell is blank. Rate per 100,000 population is calculated using the population data from the US Census Bureau's Population Estimates Program. Rate per 100,000 population is not shown for US Territories. Rate per 100,000 population is not shown for cases and deaths with an unknown date. Rate per 100,000 population is not shown for cases reported as "Pending in Data" because calculation is omitted regarding estimated denominators in daily counts. Demographic data for deaths is based on a subset of cases where case level data is available. Case numbers reported on other websites may differ from what is posted on CDC's website because CDC's overall case information is updated through a confirmation process with jurisdictions. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The process used for finding and confirming cases displayed by other sites may differ.
