CDC COVID Data Tracker

Maps, charts, and data provided by the CDC

Compare Trends in COVID-19 Cases and Deaths in the US

Reported to the CDC by State or Territory

Select up to 6 states or territories:

Arizona × | California × | Florida × | Georgia × | New York × | Texas ×

☐ Show full US Data (available only in logarithmic scale)

Cumulative deaths attributed to Covid-19, reported to CDC, in AZ, CA, FL, GA, NY, and TX

Cumulative deaths (per 100K), by number of days since 3 total deaths (per 100K) first recorded.

Data Sources, References & Notes: Data Sources, References & Notes

The case classifications for COVID-19, a nationally notifiable disease, are described in an update published COVID-19 position statement and case definition issued by the Council of State and Territorial Epidemiologists on August 5, 2020 (http://wwwnc.cdc.gov/mmwr/volumes/69/wr/mm6932e1.htm?s_cid=mm6932e1_w#suggestedcitation) However, there is some variation in how jurisdictions are implementing the case classification and reporting COVID-19 cases. Further information on how COVID-19 cases are classified can be found at COVID-19 Frequently Asked Questions.

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons reported to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states. U.S. territories, New York City (NYC) and the District of Columbia (DC) from the previous day. Cumulative counts for previous days may differ from those displayed due to retrospective updates to COVID-19 cases and deaths. Counties for NYC and New York State are shown separately. Data for New York State include cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted with an NA.

Cumulative deaths attributed to Covid-19 are based on the number of days since 3 total deaths first recorded. Deaths attributed to Covid-19 are based on the number of days since 3 total deaths were first recorded. When deaths are attributed to COVID-19 are displayed, the index day is when 3 average daily deaths were first recorded. For both of these measures, the 7-day moving average of new cases or deaths is reported by the date of occurrence, rather than date of reporting. For jurisdictions with sporadic reporting of deaths, the 7-day moving average of new cases or deaths may be zero.

When cumulative cases or deaths of COVID-19 are displayed, the index date is when 100 cases or deaths were first recorded. The trend line shows the cumulative cases or deaths by number of days since the index date.

Daily cases or death rates per 100,000 are displayed, the index date is when 3 average daily cases or deaths per 100,000 people were first recorded. The trend line shows 7-day moving average of new cases or deaths per 100,000 people using the U.S. Census Bureau, 2019 American Community Survey 1-year estimates by the number of days since the index date.

When cumulative cases or deaths per 100,000 are displayed, the index date is when 3.3 total cases per 100,000 people was first recorded. The trend line shows cumulative cases per 100,000 using the U.S. Census Bureau, 2019 American Community Survey 1-year estimates by the number of days since the index date.

Data for Guam, the Northern Mariana Islands, Puerto Rico, and the Virgin Islands are reported by the Centers for Disease Control and Prevention (CDC) and are included in the aggregate counts for the United States. Data for American Samoa are not included in the aggregate counts for the United States because American Samoa does not report data on COVID-19 cases and deaths. Data for American Samoa are shown separately. Data for New York State include cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted with an NA.

COVID's overall COVID-19 case numbers are validated through a confirmation process with each jurisdiction. COVID-19 case numbers reported on other websites may differ from what is posted on COVID Data Tracker. Due to the ongoing nature of reporting and COVID Data Tracker updates, which may differ by up to 24 hours, CDC COVID-19 counts from previous days may be continually revised to more recently acquired and processed but all jurisdictions report counts daily. some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases displayed by other sites may differ.
