View and Download COVID-19 Case Surveillance Public Use Data

Data Sources, References & Notes: Total cases are based on aggregate counts of COVID-19 cases sent by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 22, 2020. Cases reported to CDC include those from the United States from Wuhan, China, and Japan. Cases are counted in the jurisdiction of residence when that information is known. Cases are counted and reported by CDC in the jurisdiction in which they are reported, which may differ from the jurisdiction of residence. Cases are counted in the jurisdiction of residence when that information is known.

Rates are calculated using U.S. Census Bureau, 2018 American Community Survey 1-year estimates and are shown as cases/100,000 people. The chart shows total cases per state, new cases in the last 7 days per state, and the cases reported/100,000 per state. The 7-day moving average of new cases (current day + 6 previous days) is calculated to smooth reporting artifacts and variation.

Case counts reported on other websites may differ from what is posted on CDC's website because CDC's overall case numbers are validated through a confirmation process with each jurisdiction. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The process used for finding and combining cases displayed by other sites may differ. *Counts for New York City are from the date when separately data for New York State show total cases and deaths for the State excluding data for NYC.
