View and Download COVID-19 Case Surveillance Public Use Data

Data Sources, References & Notes: Total cases and based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons reported to the United States from Wuhan, China, and Japan. The numbers are confirmed and probable COVID-19 cases as reported by state, local, U.S. territories, New York City, and the District of Columbia from the previous day. *Counts for New York City and New York state are shown separately; data for New York State show only cases and deaths for the State excluding data for NYC. When not available to CDC this is annotated by N/A. Rates are calculated using U.S. Census Bureau, 2018 American Community Survey 1 year estimates. Cases shown in case trends are based on case onset date, when available, or specimen collection date, when available. Deaths are based on date of death. The 7-day moving average of new cases (current day + previous 6 days) is used to smooth out fluctuations in the data. Demographic data for deaths are based on date of case when available. Demographic data for cases are based on date of case when available. Trends in Number of COVID-19 Cases and Deaths in the US Reported to CDC, by State/Territory. Demographic data are based on cases with available information. Demographic data are not available for all cases. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The process used for finding and confirming cases displayed by other cities may differ.**
