View and Download COVID-19 Case Surveillance Public Use Data

**Data Sources, References & Notes:** Total cases are based on aggregate counts of COVID-19 cases sent by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020 with the exception of presumptive cases from the United States from Wuhan, China, and Japan. Case and death data are charted from date of first laboratory-rather than calendar-date. Case numbers are confirmed and probable COVID-19 cases, as reported by U.S. states and U.S. territories. When not available in CDC, this is annotated by N/A.

Rates are calculated using U.S. Census Bureau, 2018 American Community Survey 1-year estimates and are shown as cases/100,000 people. The chart shows total cases per state, new cases in the last 7 days, and the rate (cases/100,000 people). The 7-day moving average of new cases is the mean of the last 7 consecutive days. Case numbers are shown by date of first laboratory-confirmed case.

Case numbers reported on other websites may differ from what is posted on CDC's website because CDC's case counts are based on cases submitted through a confirmation process with each jurisdiction. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The process used for finding and confirming cases displayed by other sites may differ. "Excess" for New York City and New York state are shown separately; data for New York state show total cases and deaths for the State excluding New York City.
