United States COVID-19 Cases and Deaths by State

Reported to the CDC since January 21, 2020

TOTAL CASES
20,960,096
+227,692 New Cases

CASES PER 100,000 PEOPLE
6,313

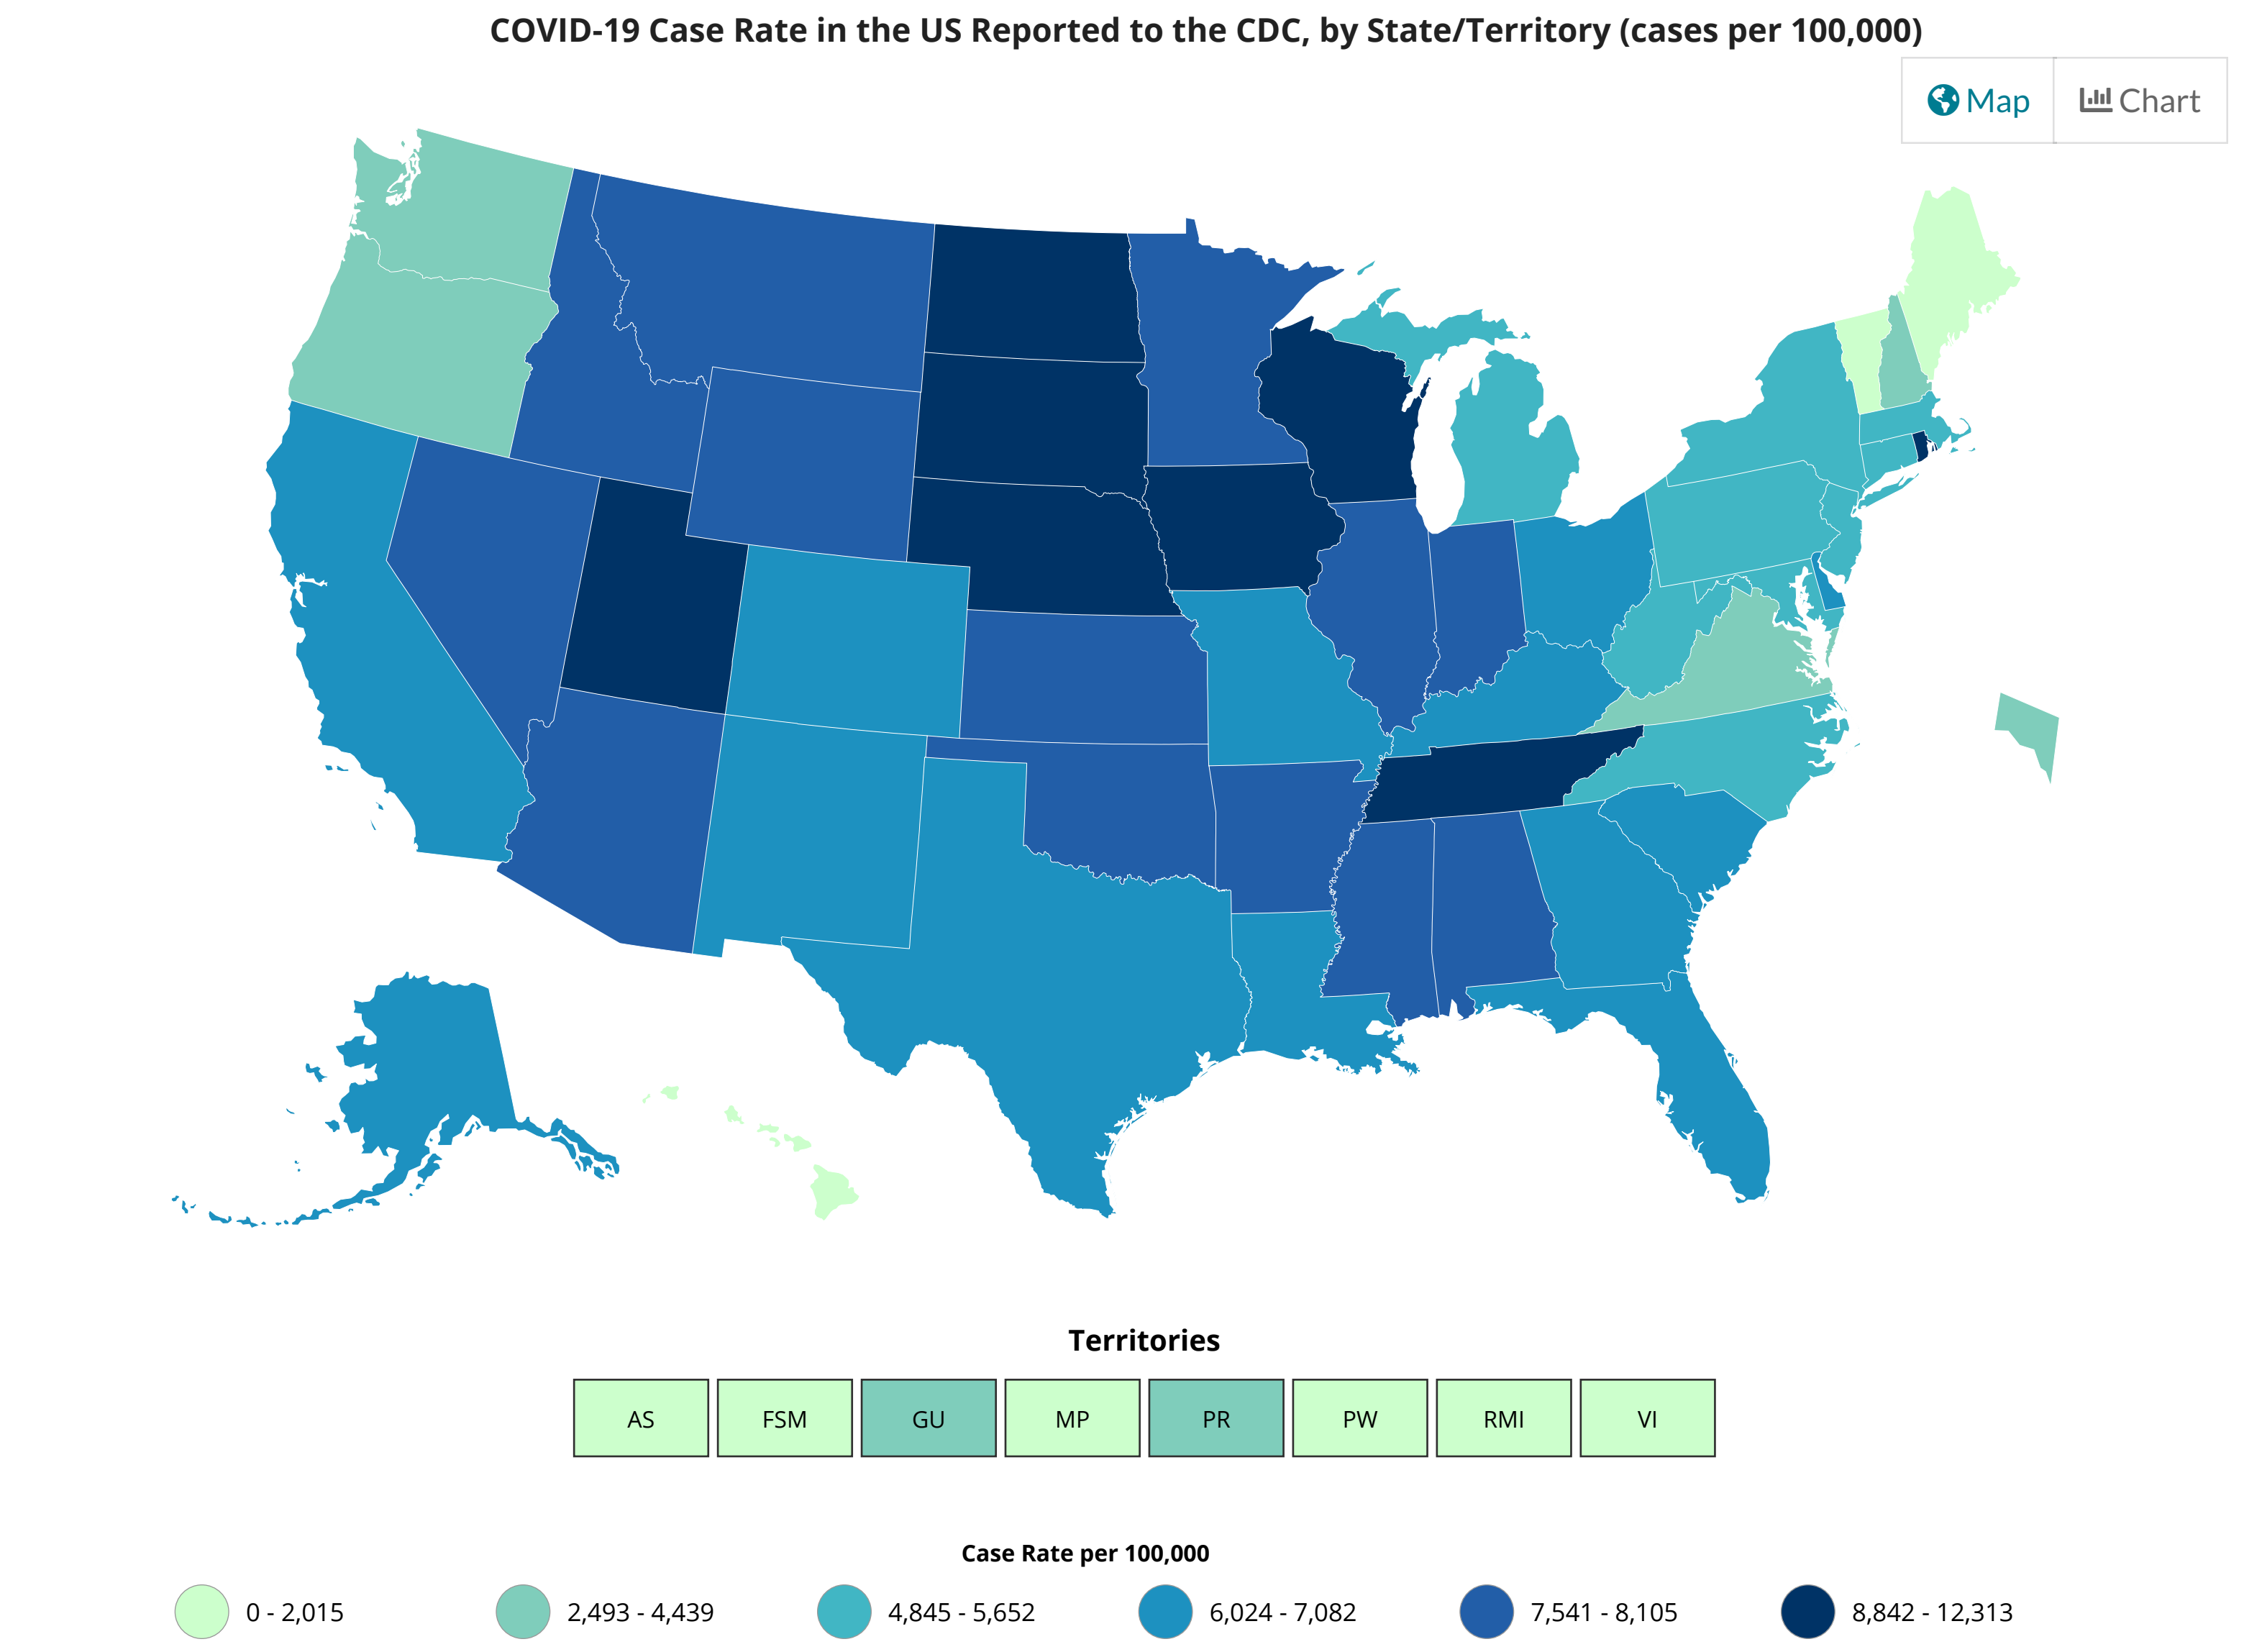

TOTAL DEATHS
356,005
+3,541 New Deaths

Data Table for Case Rate by State/Territory

CDC | Updated: Jan 6 2021 1:16PM

Download Data

State/Territory	Case Rate per 100,000
North Dakota	12,313
South Dakota	11,425
Wisconsin	9,135
Iowa	9,106
Tennessee	9,044
Utah	9,013
Rhode Island	8,859
Nebraska	8,842
Idaho	8,105
Oklahoma	8,025
Kansas	7,940
Indiana	7,918
Arkansas	7,916
Wyoming	7,874
Illinois	7,826
Montana	7,801
Arizona	7,796
Alabama	7,742
Mississippi	7,669
Nevada	7,644
Minnesota	7,541
New Mexico	7,082
Louisiana	7,026
Georgia	6,651
Missouri	6,608
Alaska	6,426
South Carolina	6,372
Florida	6,368
Texas	6,357
Ohio	6,288
Kentucky	6,286
Delaware	6,275
California	6,206
Colorado	6,024
Massachusetts	5,652
New Jersey	5,625
Connecticut	5,525
New York City*	5,509
North Carolina	5,486
Michigan	5,474
New York*	5,360
Pennsylvania	5,264
West Virginia	5,198
Maryland	4,845
Guam	4,439
Virginia	4,420
District of Columbia	4,274
New Hampshire	3,530
Washington	3,398
Oregon	2,833
Puerto Rico	2,493
Maine	2,015
Virgin Islands	1,990
Hawaii	1,534
Vermont	1,288
Republic of Marshall Islands	7
American Samoa	5
Federated States of Micronesia	0
Northern Mariana Islands	0
Palau	0

[View and Download](#) COVID-19 Case Surveillance Public Use Data

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an updated interim COVID-19 position statement and case definition issued by the Council of State and Territorial Epidemiologists on August 5, 2020 (https://www.cdc.gov/nndss/conditions/coronavirus-disease-2019-covid-19/case-definition/2020/08/05/) However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at CDC's COVID-19 FAQ webpage (https://www.cdc.gov/coronavirus/2019-ncov/covid-data/faq-surveillance.html).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates (https://www2.census.gov/programs-surveys/popest/tables/2010-2019/national/totals/na-est2019-01.xlsx). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
