COVID-19 Case Rate in the US Reported to the CDC, by State/Territory (cases per 100,000)

Data Table for Case Rate by State/Territory

CDC | Updated: Jan 8 2021 6:19PM

State/Territory ↕	Case Rate per 100,000 ↕
North Dakota	12,392
South Dakota	11,545
Tennessee	9,287
Wisconsin	9,283
Utah	9,274
Iowa	9,247
Rhode Island	9,118
Nebraska	8,974
Oklahoma	8,250
Idaho	8,236
Arkansas	8,149
Kansas	8,129
Indiana	8,118
Arizona	8,032
Wyoming	7,977
Illinois	7,955
Alabama	7,938
Montana	7,930
Mississippi	7,851
Nevada	7,818
Minnesota	7,617
Louisiana	7,272
New Mexico	7,240
Georgia	6,816
Missouri	6,720
South Carolina	6,567
Florida	6,539
Texas	6,524
Kentucky	6,523
Alaska	6,515
Delaware	6,464
Ohio	6,442
California	6,374
New Jersey	6,359
Colorado	6,128
Massachusetts	5,848
Connecticut	5,687
New York City*	5,668
North Carolina	5,652
Michigan	5,565
New York*	5,561
Pennsylvania	5,414
West Virginia	5,357
Maryland	4,956
Virginia	4,545
Guam	4,464
District of Columbia	4,357
New Hampshire	3,623
Washington	3,467
Oregon	2,871
Puerto Rico	2,570
Maine	2,113
Virgin Islands	2,035
Hawaii	1,563
Vermont	1,347
Republic of Marshall Islands	7
American Samoa	5
Federated States of Micronesia	0
Northern Mariana Islands	0
Palau	0

How does COVID-19 Spread?

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [an updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the United States from Wuhan, China, and Japan. All displayed counts also include probable COVID-19 cases and deaths. Counts for NYC are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days are calculated as the 7-day moving average of new cases (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are the timing of reporting a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the delayed reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
