United States COVID-19 Cases and Deaths by State

Reported to the CDC since January 21, 2020

TOTAL CASES

21,853,491

+314,093 New Cases

CASES PER 100,000 PEOPLE

6,582

TOTAL DEATHS

367,652

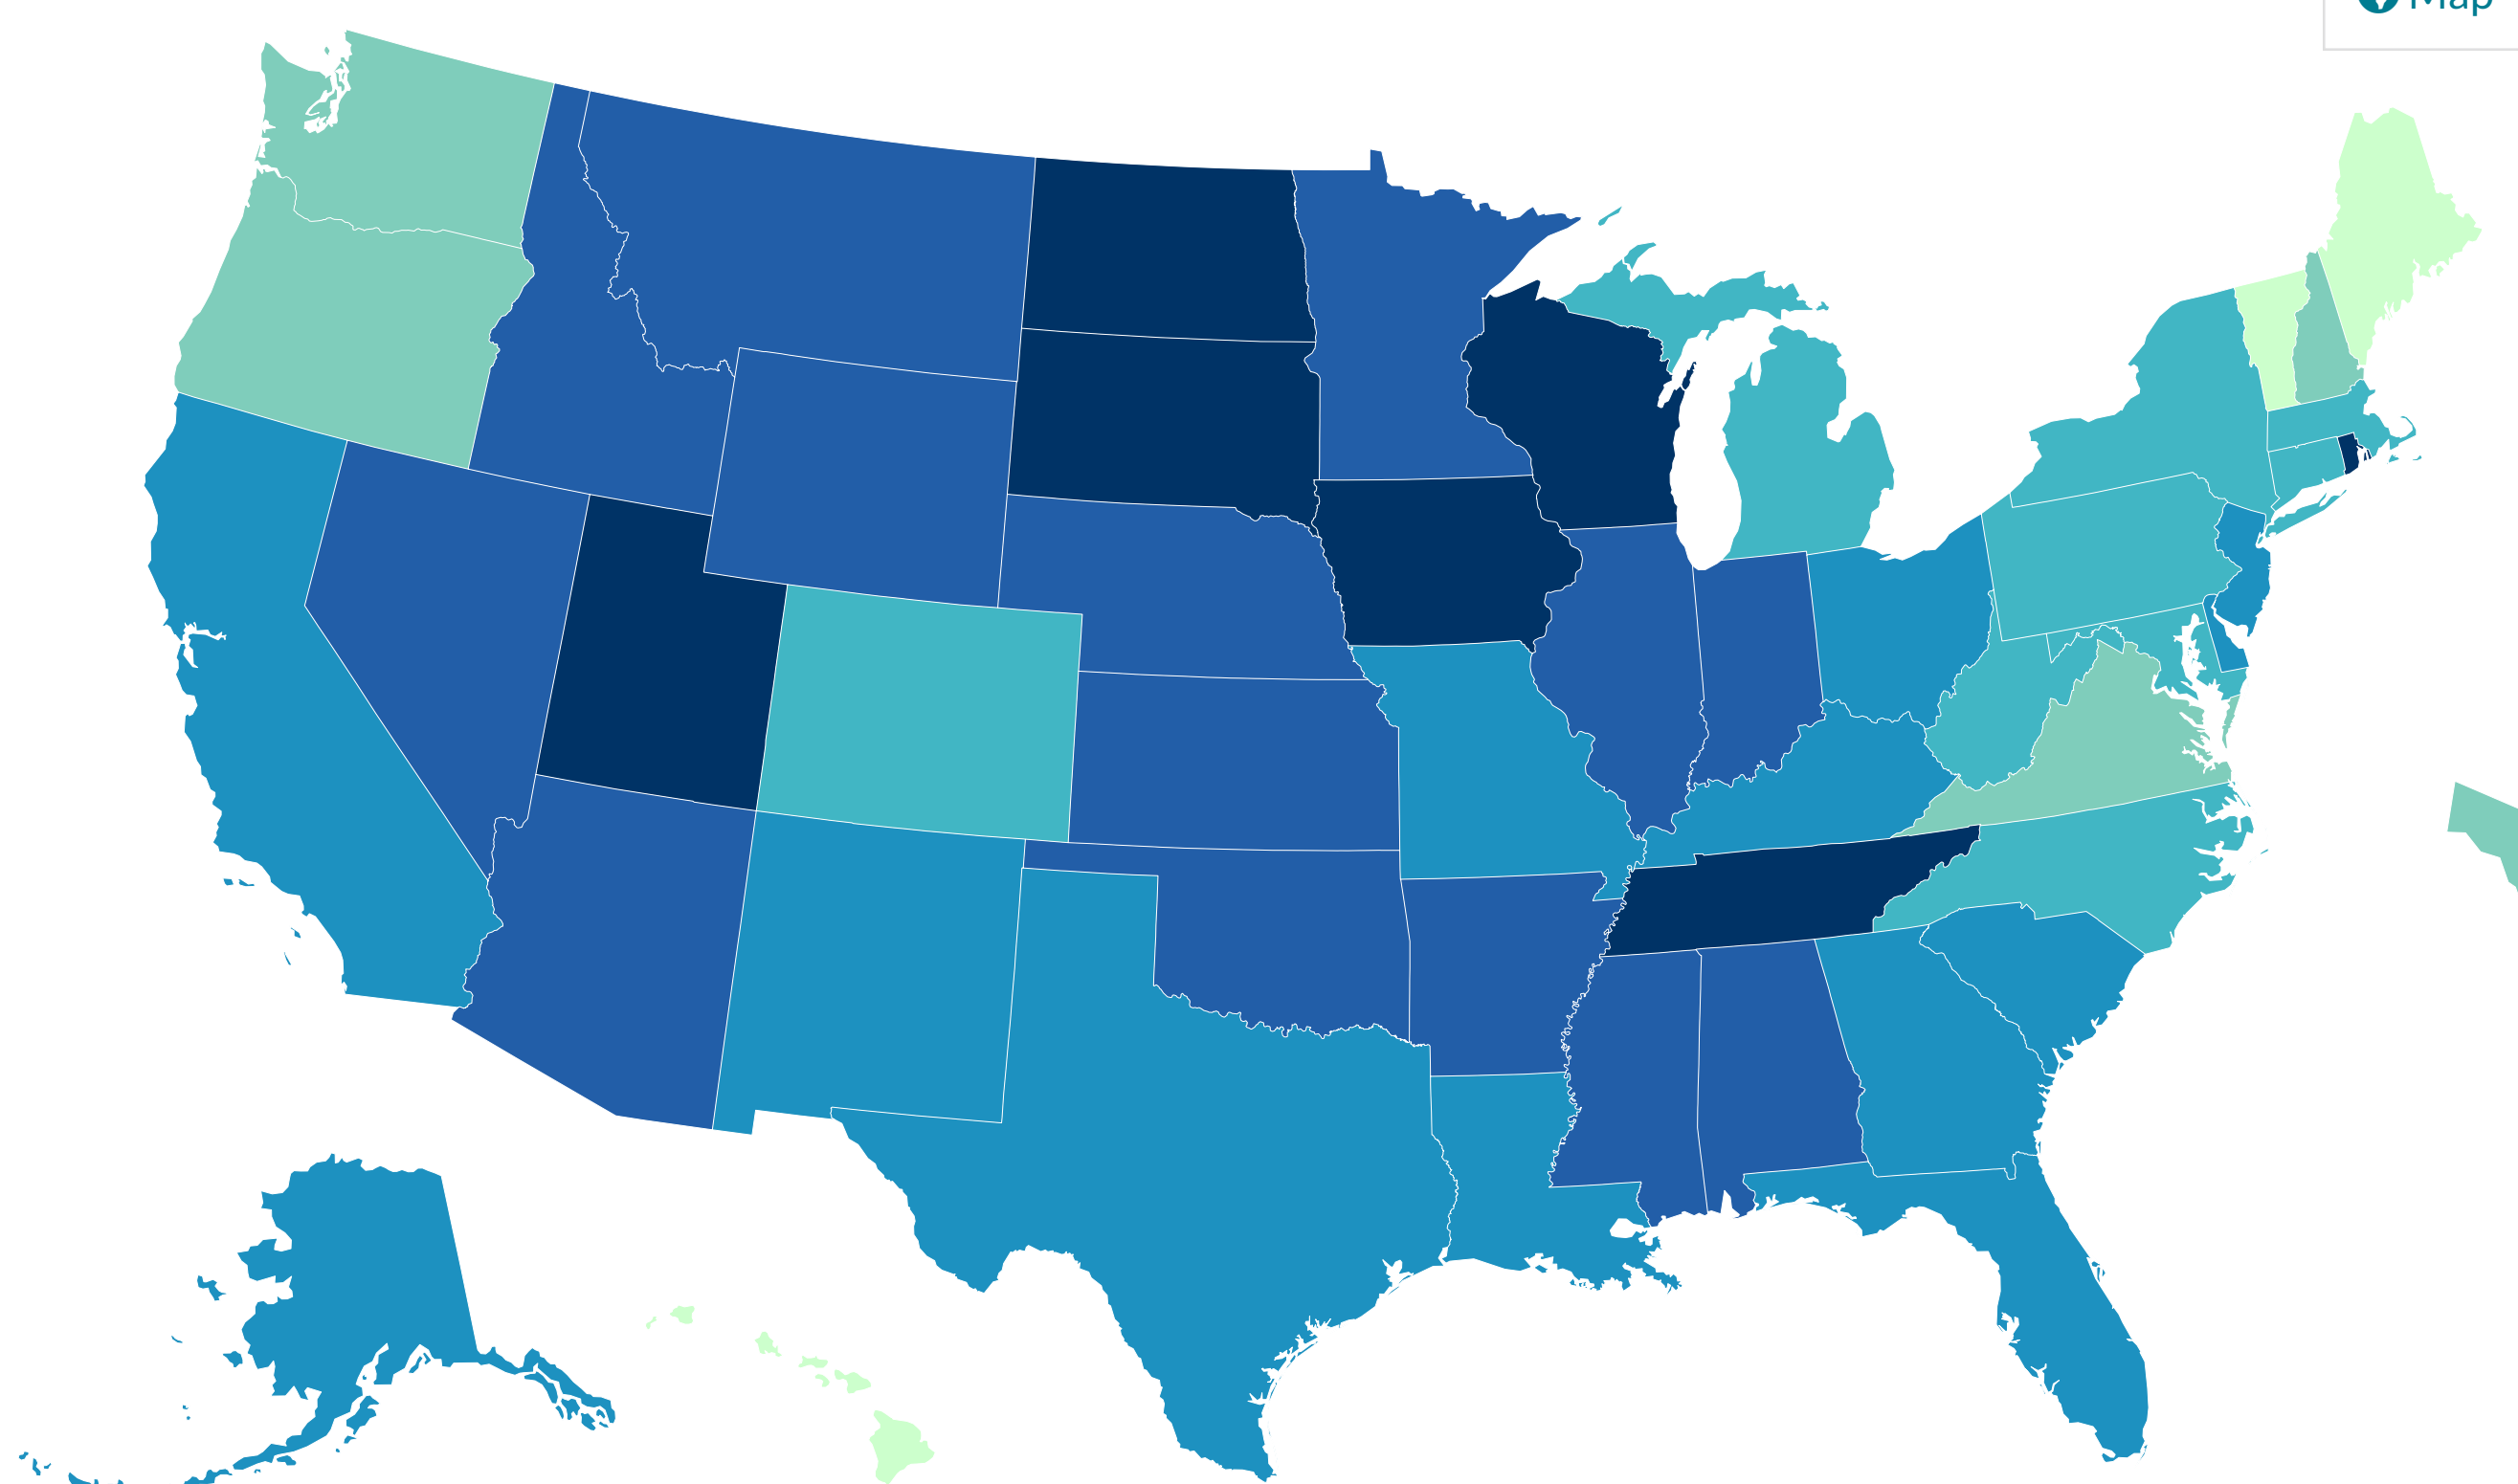

+3,623 New Deaths

Data Table for Case Rate by State/Territory

CDC | Updated: Jan 9 2021 1:46PM

[Download Data](#)

State/Territory	Case Rate per 100,000
North Dakota	12,408
South Dakota	11,595
Utah	9,392
Tennessee	9,380
Wisconsin	9,354
Iowa	9,319
Rhode Island	9,214
Nebraska	9,027
Oklahoma	8,349
Kansas	8,318
Idaho	8,296
Arkansas	8,246
Indiana	8,208
Arizona	8,192
Wyoming	8,060
Alabama	8,041
Illinois	8,028
Montana	8,006
Mississippi	7,959
Nevada	7,911
Minnesota	7,659
Louisiana	7,344
New Mexico	7,318
Georgia	6,941
Missouri	6,790
South Carolina	6,685
Kentucky	6,629
Florida	6,628
New Jersey	6,628
Delaware	6,621
Texas	6,605
Alaska	6,570
Ohio	6,524
California	6,501
Colorado	6,184
Massachusetts	5,959
Connecticut	5,778
New York City*	5,748
North Carolina	5,747
New York*	5,675
Michigan	5,604
Pennsylvania	5,493
West Virginia	5,463
Maryland	5,018
Virginia	4,613
Guam	4,464
District of Columbia	4,408
New Hampshire	3,688
Washington	3,527
Oregon	2,913
Puerto Rico	2,587
Maine	2,159
Virgin Islands	2,047
Hawaii	1,580
Vermont	1,381
Republic of Marshall Islands	7
American Samoa	5
Federated States of Micronesia	1
Northern Mariana Islands	0
Palau	0

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [an updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons reported to the United States from Wuhan, China, and Japan. All displayed counts include probable COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include confirmed COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
