Data Table for Case Rate by State/Territory

CDC | Updated: Jan 10 2021 1:01PM

[Download Data](#)

State/Territory	Case Rate per 100,000
North Dakota	12,429
South Dakota	11,632
Utah	9,474
Tennessee	9,466
Wisconsin	9,414
Iowa	9,361
Rhode Island	9,214
Nebraska	9,079
Oklahoma	8,513
Idaho	8,351
Arizona	8,344
Arkansas	8,342
Kansas	8,318
Indiana	8,297
Alabama	8,141
Illinois	8,081
Wyoming	8,072
Montana	8,056
Mississippi	8,033
Nevada	7,997
Minnesota	7,703
New Mexico	7,390
Louisiana	7,344
Georgia	7,053
Missouri	6,853
South Carolina	6,799
Kentucky	6,724
Florida	6,698
Texas	6,686
California	6,634
Delaware	6,621
Alaska	6,613
Ohio	6,596
New Jersey	6,521
Colorado	6,233
Massachusetts	6,062
North Carolina	5,858
New York City*	5,829
Connecticut	5,778
New York*	5,773
Michigan	5,633
Pennsylvania	5,572
West Virginia	5,568
Maryland	5,073
Virginia	4,673
Guam	4,464
District of Columbia	4,457
New Hampshire	3,741
Washington	3,567
Oregon	2,951
Puerto Rico	2,603
Maine	2,180
Virgin Islands	2,047
Hawaii	1,596
Vermont	1,409
Republic of Marshall Islands	7
American Samoa	5
Federated States of Micronesia	1
Northern Mariana Islands	0
Palau	0

**Data Sources, References & Notes:** The case classifications for COVID-19, a nationally notifiable disease, are described in an [an updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019\* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019\* American Community Survey 1-year estimates.

\*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
