Updated: January 13, 2021

Note: Provisional death counts are based on death certificate data received and coded by the National Center for Health Statistics as of January 13, 2021. Death counts are delayed and may differ from other published sources (see Technical Notes). Counts will be

updated periodically. Additional information will be added to this site as available.

The provisional counts for coronavirus disease 2019 (COVID-19) deaths are based on a current flow of mortality data in the National Vital Statistics System. National provisional counts include deaths occurring within the 50 states and the District of Columbia that have been received and coded as of the date specified. It is important to note that it can take several weeks for death records to be

Therefore, the data shown on this page may be incomplete, and will likely not include all deaths that

occurred during a given time period, especially for the more recent time periods. Death counts for

submitted to National Center for Health Statistics (NCHS), processed, coded, and tabulated.

earlier weeks are continually revised and may increase or decrease as new and updated death certificate data are received from the states by NCHS. COVID-19 death counts shown here may differ from other published sources, as data currently are lagged by an average of 1–2 weeks. The provisional data presented on this page include the weekly provisional count of deaths in the United States due to COVID-19, deaths from all causes and percent of expected deaths (i.e., number of deaths received over number of deaths expected based on data from previous years), pneumonia deaths (excluding pneumonia deaths involving influenza), pneumonia deaths involving COVID-19, influenza deaths, and deaths involving pneumonia, influenza, or COVID-19; (a) by week ending date and (b) by specific jurisdictions. For the Index of Provisional COVID-19 Mortality Surveillance and Ad-hoc Data Files, click here.

Table 1 has counts of death involving COVID-19 and select causes of death by the week ending date in which the death occurred. For deaths involving COVID-19 by week ending date at the state level, Click here to download As of January 4, 2021, the tables and datasets on this page include data from January 2020 through the present data period. Cumulative death totals will be higher than previous reports which were restricted to include data from the week ending February 1, 2020.

COVID-19 deaths are identified using a new ICD-10 code. When COVID-19 is reported as a cause of death – or when it is listed as a "probable" or "presumed" cause — the death is coded as **U07.1**. This can include cases with or without laboratory confirmation.

occurring within the 50 states and the District of Columbia.

Why These Numbers are Different

data. • Death certificates take time to be completed. There are many steps to filling out and submitting a death certificate. Waiting for test results can create additional delays.

Provisional death counts may not match counts from other sources, such as media reports or

numbers from county health departments. Counts by NCHS often track 1–2 weeks behind other

a person, which takes an average of 7 days. • Other reporting systems use different definitions or methods for counting deaths. Things to know about the data

Provisional counts are not final and are subject to change. Counts from previous weeks are continually revised as more records are received and processed.

Provisional data are not yet complete. Counts will not include all deaths that occurred during a given time period, especially for more recent periods. However, we can estimate how complete our numbers are by looking at the average number of deaths reported in previous

- NCHS also provides summaries that examine deaths in specific categories and in greater geographic detail, such as deaths by county and by race and Hispanic origin.
  - States report at different rates. Currently, 63% of all U.S. deaths are reported within 10 days of the date of death, but there is significant variation between states. • It takes extra time to code COVID-19 deaths. While 80% of deaths are electronically processed and coded by NCHS within minutes, most deaths from COVID-19 must be coded by

  - years. **Death counts should not be compared across states.** Some states report deaths on a daily

basis, while other states report deaths weekly or monthly. State vital record reporting may also

- be affected or delayed by COVID-19 related response activities. For more detailed technical information, visit the <u>Provisional Death Counts for Coronavirus</u> Disease 2019 (COVID-19) Technical Notes page.
