## United States COVID-19 Cases and Deaths by State

Reported to the CDC since January 21, 2020

TOTAL CASES  
**23,982,584**  
+142,716 New Cases

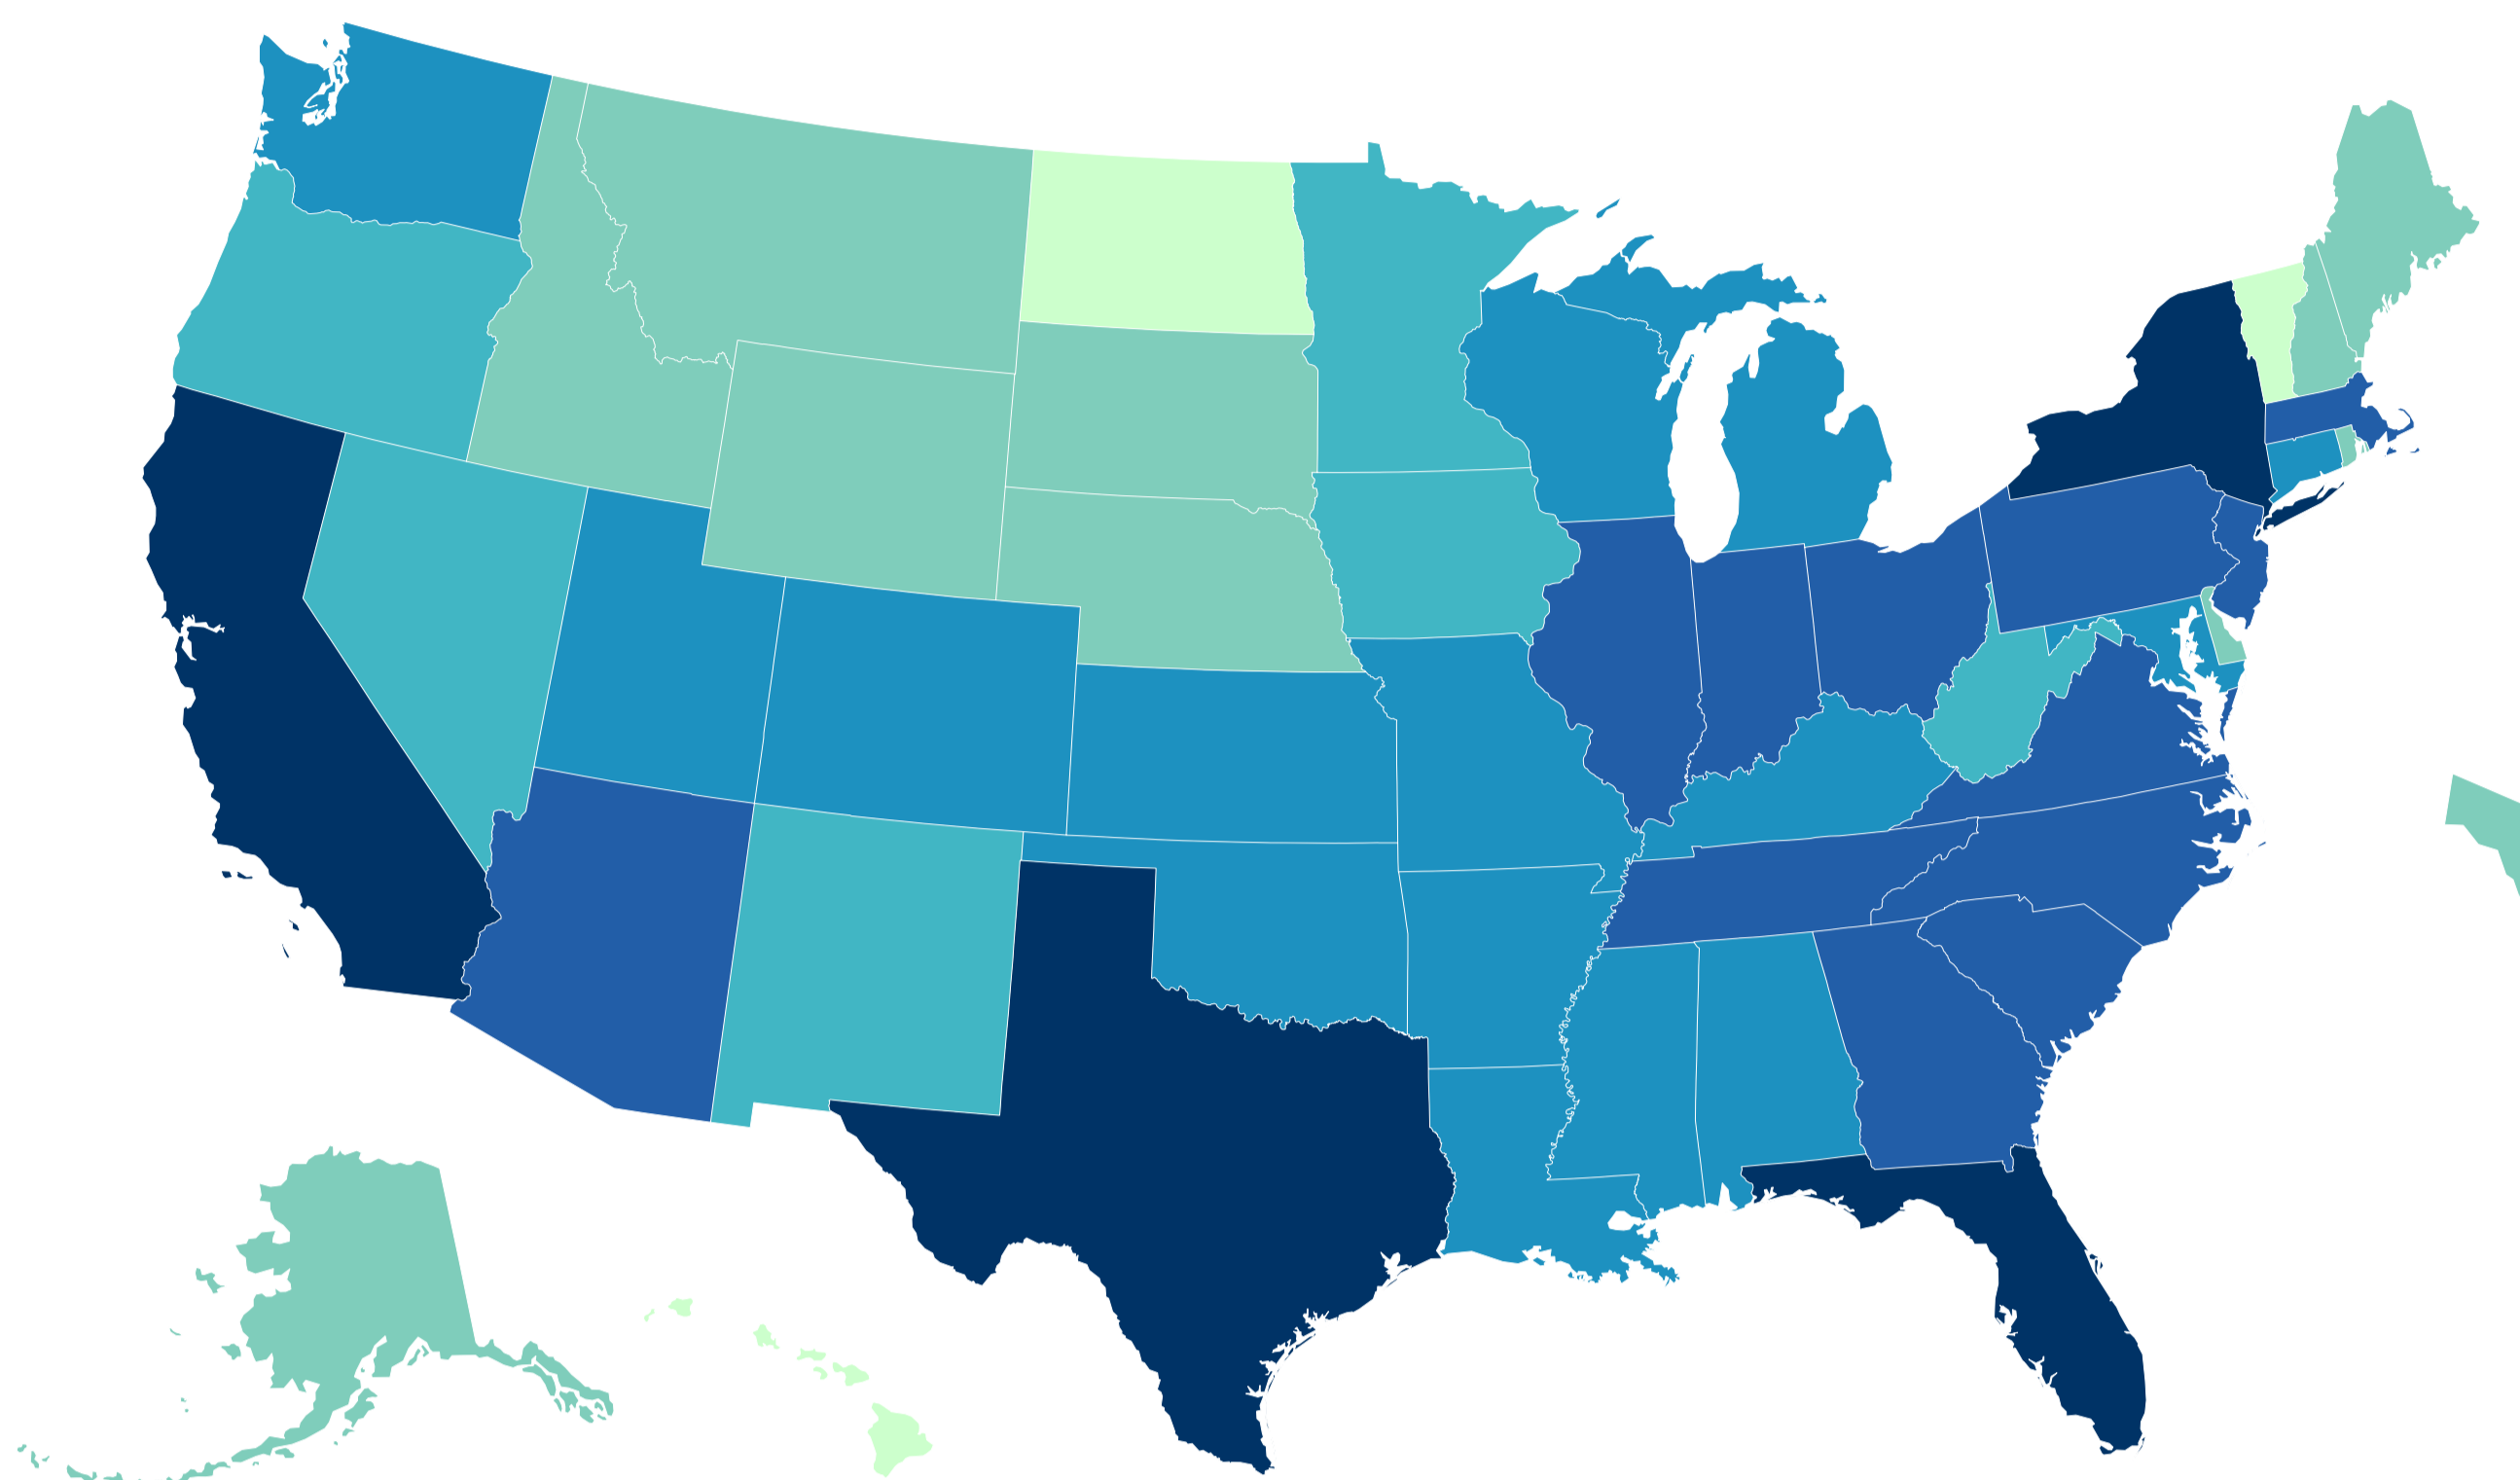

CASES IN LAST 7 DAYS  
**1,242,440**

TOTAL DEATHS  
**398,009**  
+1,567 New Deaths

CDC | Updated: Jan 20 2021 9:10AM

### Data Table for Cases in Last 7 Days by State/Territory

CDC | Updated: Jan 20 2021 9:10AM

[Download Data](#)

State/Territory	Cases in Last 7 Days
California	225,886
Texas	130,260
Florida	73,960
New York*	53,999
Georgia	47,260
Arizona	43,182
North Carolina	38,662
Virginia	38,531
Pennsylvania	38,416
Ohio	38,128
New York City*	37,082
New Jersey	36,325
South Carolina	32,107
Illinois	32,046
Massachusetts	29,061
Tennessee	26,877
Indiana	22,232
Kentucky	19,939
Louisiana	17,012
Oklahoma	16,438
Alabama	16,180
Maryland	15,319
Utah	15,290
Michigan	14,978
Wisconsin	14,086
Connecticut	13,078
Arkansas	12,710
Kansas	12,320
Colorado	11,835
Missouri	11,723
Washington	11,395
Mississippi	11,226
Nevada	9,952
Minnesota	8,482
Iowa	7,216
West Virginia	6,606
New Mexico	6,289
Oregon	6,071
Nebraska	4,748
New Hampshire	4,716
Delaware	4,464
Idaho	4,281
Puerto Rico	3,734
Maine	3,112
Rhode Island	3,050
Montana	2,499
South Dakota	1,916
Alaska	1,650
Wyoming	1,636
District of Columbia	1,610
Vermont	973
North Dakota	936
Hawaii	792
Virgin Islands	94
Guam	71
Northern Mariana Islands	1
American Samoa	0
Federated States of Micronesia	0
Palau	0
Republic of Marshall Islands	0

†Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

**Data Sources, References & Notes:** The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated interim COVID-19 position statement and case definition](#) issued by the Council of Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated, unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019\* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019\* American Community Survey 1-year estimates.

\*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
