United States COVID-19 Cases and Deaths by State

Reported to the CDC since January 21, 2020

TOTAL CASES

23,982,584

+142,716 New Cases

CASES PER 100,000 PEOPLE

7,224

TOTAL DEATHS

398,009

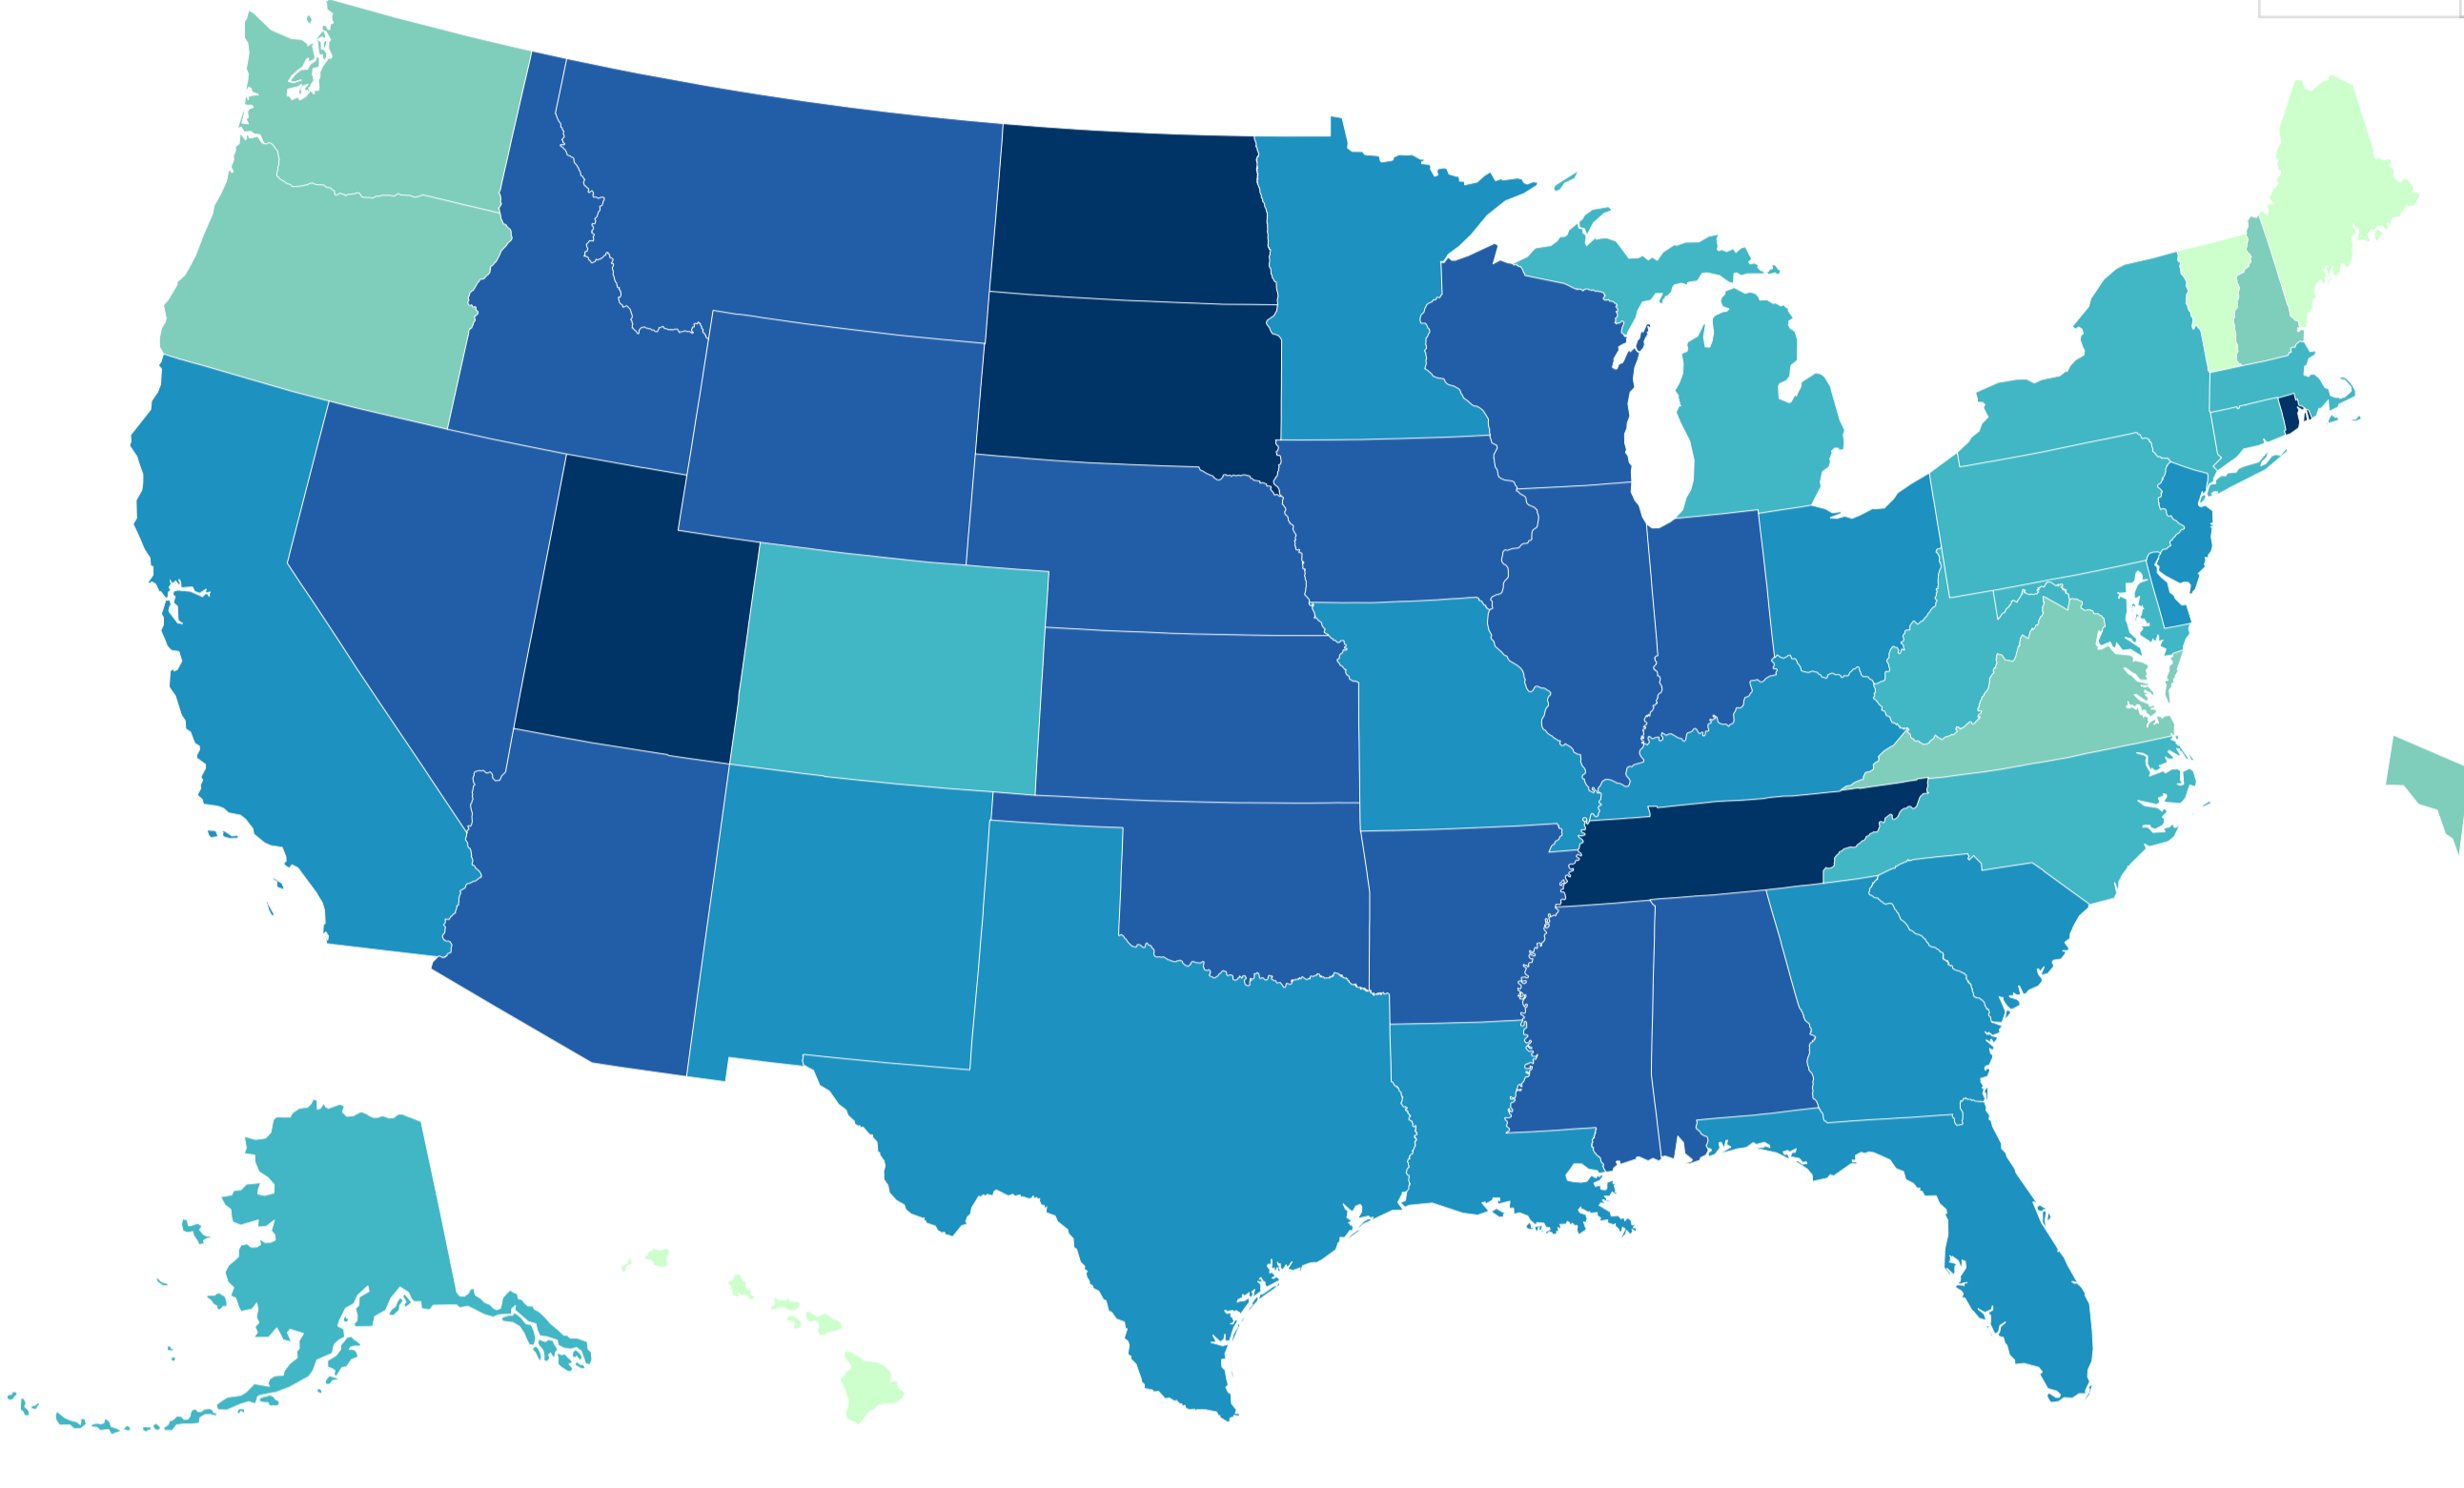

+1,567 New Deaths

CDC | Updated: Jan 20 2021 9:10AM

Data Table for Case Rate by State/Territory

CDC | Updated: Jan 20 2021 9:10AM [Download Data](#)

State/Territory ↕	Case Rate per 100,000 ↕
North Dakota	12,607
South Dakota	11,944
Utah	10,135
Tennessee	10,071
Rhode Island	9,859
Wisconsin	9,778
Iowa	9,687
Nebraska	9,430
Arizona	9,332
Oklahoma	9,175
Arkansas	9,022
Kansas	8,918
Indiana	8,804
Idaho	8,704
Alabama	8,648
Wyoming	8,589
Mississippi	8,572
Nevada	8,532
Illinois	8,461
Montana	8,381
Louisiana	7,958
Minnesota	7,932
New Mexico	7,834
Georgia	7,732
South Carolina	7,603
California	7,525
Kentucky	7,357
Texas	7,330
Delaware	7,282
Florida	7,219
Missouri	7,150
Ohio	7,110
New Jersey	7,105
Alaska	6,896
Massachusetts	6,695
Colorado	6,532
New York*	6,512
New York City*	6,471
Connecticut	6,455
North Carolina	6,432
West Virginia	6,127
Pennsylvania	6,029
Michigan	5,859
Maryland	5,462
Virginia	5,285
District of Columbia	4,822
Guam	4,533
New Hampshire	4,256
Washington	3,808
Oregon	3,174
Puerto Rico	2,767
Maine	2,549
Virgin Islands	2,159
Hawaii	1,684
Vermont	1,638
Republic of Marshall Islands	7
American Samoa	5
Federated States of Micronesia	1
Northern Mariana Islands	0
Palau	0

†Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated interim COVID-19 position statement and case definition](#) issued by the Council of Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are from aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
