Data Table for Cases in Last 7 Days by State/Territory

CDC | Updated: Jan 22 2021 1:52PM

[Download Data](#)

State/Territory	Cases in Last 7 Days
California	222,075
Texas	142,944
Florida	80,913
New York*	59,562
Georgia	53,475
Arizona	50,902
North Carolina	47,173
Ohio	42,411
Virginia	41,117
New York City*	41,024
Pennsylvania	40,270
New Jersey	36,468
Illinois	33,651
South Carolina	33,312
Massachusetts	29,613
Tennessee	27,301
Indiana	23,443
Kentucky	20,689
Alabama	17,953
Oklahoma	17,769
Louisiana	17,170
Maryland	16,176
Michigan	15,809
Arkansas	14,709
Wisconsin	14,528
Connecticut	14,252
Mississippi	12,978
Utah	12,910
Washington	12,310
Colorado	12,033
Missouri	11,881
Kansas	11,371
Nevada	10,171
Minnesota	8,827
Iowa	7,776
West Virginia	7,398
New Mexico	6,280
Oregon	5,727
New Hampshire	5,516
Rhode Island	5,400
Nebraska	5,215
Idaho	4,842
Delaware	4,458
Maine	3,494
Puerto Rico	3,328
Montana	2,539
South Dakota	1,888
District of Columbia	1,792
Wyoming	1,723
Alaska	1,406
Vermont	1,007
North Dakota	968
Hawaii	774
Virgin Islands	103
Guam	90
Northern Mariana Islands	1
American Samoa	0
Federated States of Micronesia	0
Palau	0
Republic of Marshall Islands	0

*Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by States and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates. Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous days may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and corresponds to the 7-day rolling average.
