Data Table for Cases in Last 7 Days by State/Territory

CDC | Updated: Jan 23 2021 1:01PM [Download Data](#)

State/Territory ↕	Cases in Last 7 Days ↕
California	202,444
Texas	138,386
Florida	77,905
New York*	56,182
Georgia	52,043
Arizona	49,855
North Carolina	45,695
New York City*	40,429
Pennsylvania	39,561
Ohio	39,540
Virginia	39,264
New Jersey	34,357
Illinois	34,051
South Carolina	33,221
Massachusetts	29,474
Tennessee	25,808
Indiana	22,266
Kentucky	19,509
Alabama	18,559
Oklahoma	18,094
Louisiana	15,402
Michigan	15,346
Maryland	15,276
Connecticut	14,393
Wisconsin	14,125
Arkansas	13,747
Utah	13,016
Washington	12,279
Mississippi	12,154
Colorado	11,550
Kansas	10,519
Nevada	10,162
Missouri	9,422
Minnesota	8,706
Iowa	7,815
West Virginia	6,966
New Mexico	5,926
Oregon	5,581
New Hampshire	5,451
Idaho	5,440
Nebraska	5,345
Rhode Island	5,292
Delaware	4,506
Puerto Rico	3,550
Maine	3,055
Montana	2,414
South Dakota	1,779
District of Columbia	1,765
Wyoming	1,674
Alaska	1,369
Vermont	1,025
North Dakota	1,006
Hawaii	753
Virgin Islands	117
Guam	73
Northern Mariana Islands	1
American Samoa	0
Federated States of Micronesia	0
Palau	0
Republic of Marshall Islands	0

†Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia and the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC are shown separately; NYC data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#).

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and how jurisdictions report counts daily, which may differ by up to 24 hours. CDC COVID-19 counts may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
