Data Table for Death Rate by State/Territory

CDC | Updated: Jan 23 2021 1:01PM [Download Data](#)

State/Territory ↕	Death Rate per 100,000 ↕
New York City*	315
New Jersey	235
Massachusetts	201
Rhode Island	196
Mississippi	193
Connecticut	191
South Dakota	190
North Dakota	185
Louisiana	182
Arizona	164
Illinois	162
Pennsylvania	158
Arkansas	150
Michigan	149
New Mexico	146
Indiana	143
Iowa	141
New York*	138
Alabama	132
Nevada	128
Tennessee	128
South Carolina	124
Georgia	123
Kansas	123
District of Columbia	122
Florida	116
Texas	116
Maryland	113
Minnesota	108
Missouri	106
Delaware	105
Wisconsin	105
Montana	103
West Virginia	103
Wyoming	98
Nebraska	97
Colorado	94
Idaho	93
California	90
Ohio	90
Oklahoma	81
North Carolina	80
Guam	77
Kentucky	74
New Hampshire	71
Virginia	71
Puerto Rico	55
Washington	54
Utah	49
Oregon	44
Maine	40
Alaska	34
Vermont	27
Hawaii	23
Virgin Islands	22
Northern Mariana Islands	3
American Samoa	0
Federated States of Micronesia	0
Palau	0
Republic of Marshall Islands	0

†Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC are shown separately; NYC data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 people are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#).

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID-19 data reporting, which may differ by up to 24 hours. CDC COVID-19 counts on other websites may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
