United States COVID-19 Cases and Deaths by State

Reported to the CDC since January 21, 2020

TOTAL CASES

25,018,520

+142,259 New Cases

CASES IN LAST 7 DAYS

1,178,650

TOTAL DEATHS

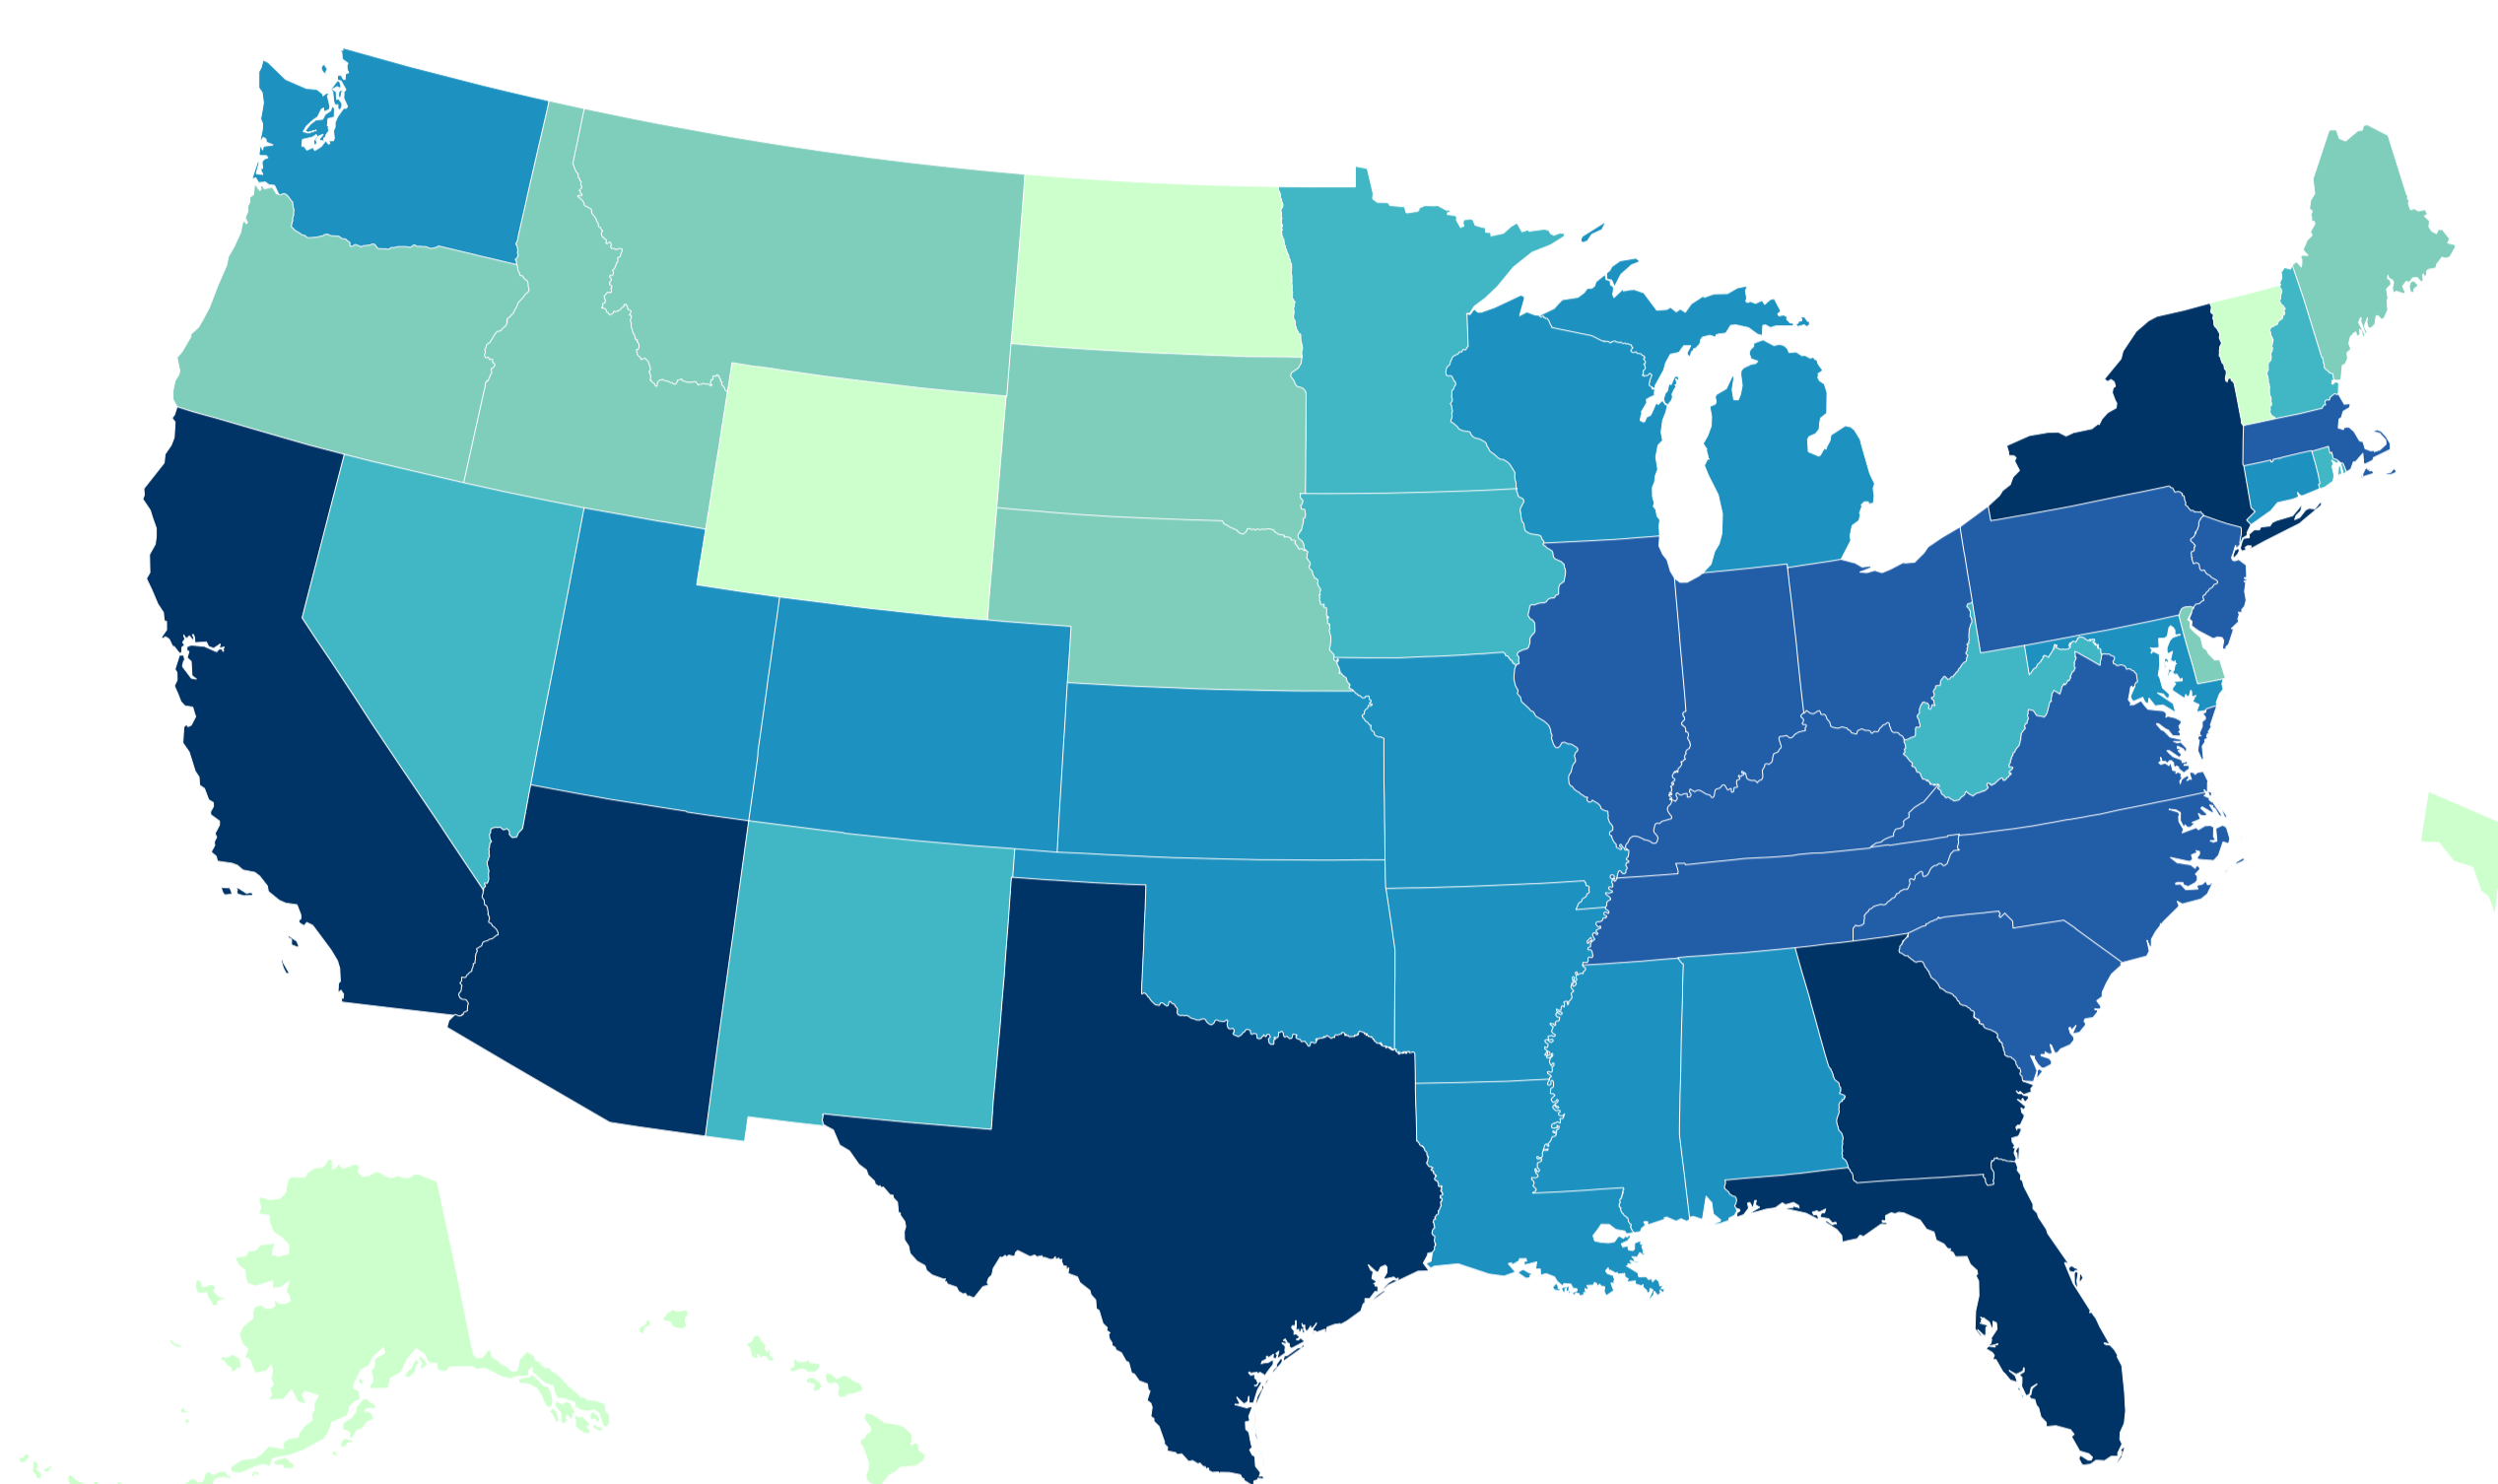

417,936

+1,926 New Deaths

CDC | Updated: Jan 25 2021 5:16PM

View: Cases Deaths
Time period: Last 7 Days Since Jan 21, 2020
Metric: Count Rate per 100,000

Data Table for Cases in Last 7 Days by State/Territory

CDC | Updated: Jan 25 2021 5:16PM

[Download Data](#)

State/Territory	Cases in Last 7 Days
California	166,676
Texas	126,564
Florida	76,721
New York*	53,300
Georgia	50,916
Arizona	48,692
North Carolina	44,175
New York City*	39,695
Ohio	37,568
Pennsylvania	36,133
New Jersey	35,587
Illinois	32,990
Virginia	32,069
South Carolina	30,141
Massachusetts	27,614
Tennessee	23,396
Indiana	20,828
Kentucky	19,911
Alabama	18,572
Oklahoma	17,564
Michigan	14,961
Maryland	14,924
Louisiana	14,882
Connecticut	14,393
Wisconsin	13,211
Arkansas	12,944
Utah	12,568
Missouri	11,986
Washington	11,648
Colorado	11,304
Mississippi	11,214
Kansas	10,519
Nevada	9,334
Minnesota	8,609
Iowa	8,026
West Virginia	6,486
New Mexico	5,568
New Hampshire	5,473
Rhode Island	5,292
Nebraska	5,169
Oregon	4,963
Delaware	4,281
Idaho	3,952
Puerto Rico	3,657
Maine	3,170
Montana	2,259
South Dakota	1,604
Wyoming	1,535
District of Columbia	1,450
Alaska	1,314
Vermont	976
North Dakota	967
Hawaii	746
Virgin Islands	81
Guam	73
Northern Mariana Islands	1
American Samoa	0
Federated States of Micronesia	0
Palau	0
Republic of Marshall Islands	0

† Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [an updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregated state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#).

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
