## United States COVID-19 Cases and Deaths by State

Reported to the CDC since January 21, 2020

TOTAL CASES

25,018,520

+142,259 New Cases

CASES PER 100,000 PEOPLE

7,536

TOTAL DEATHS

417,936

+1,926 New Deaths

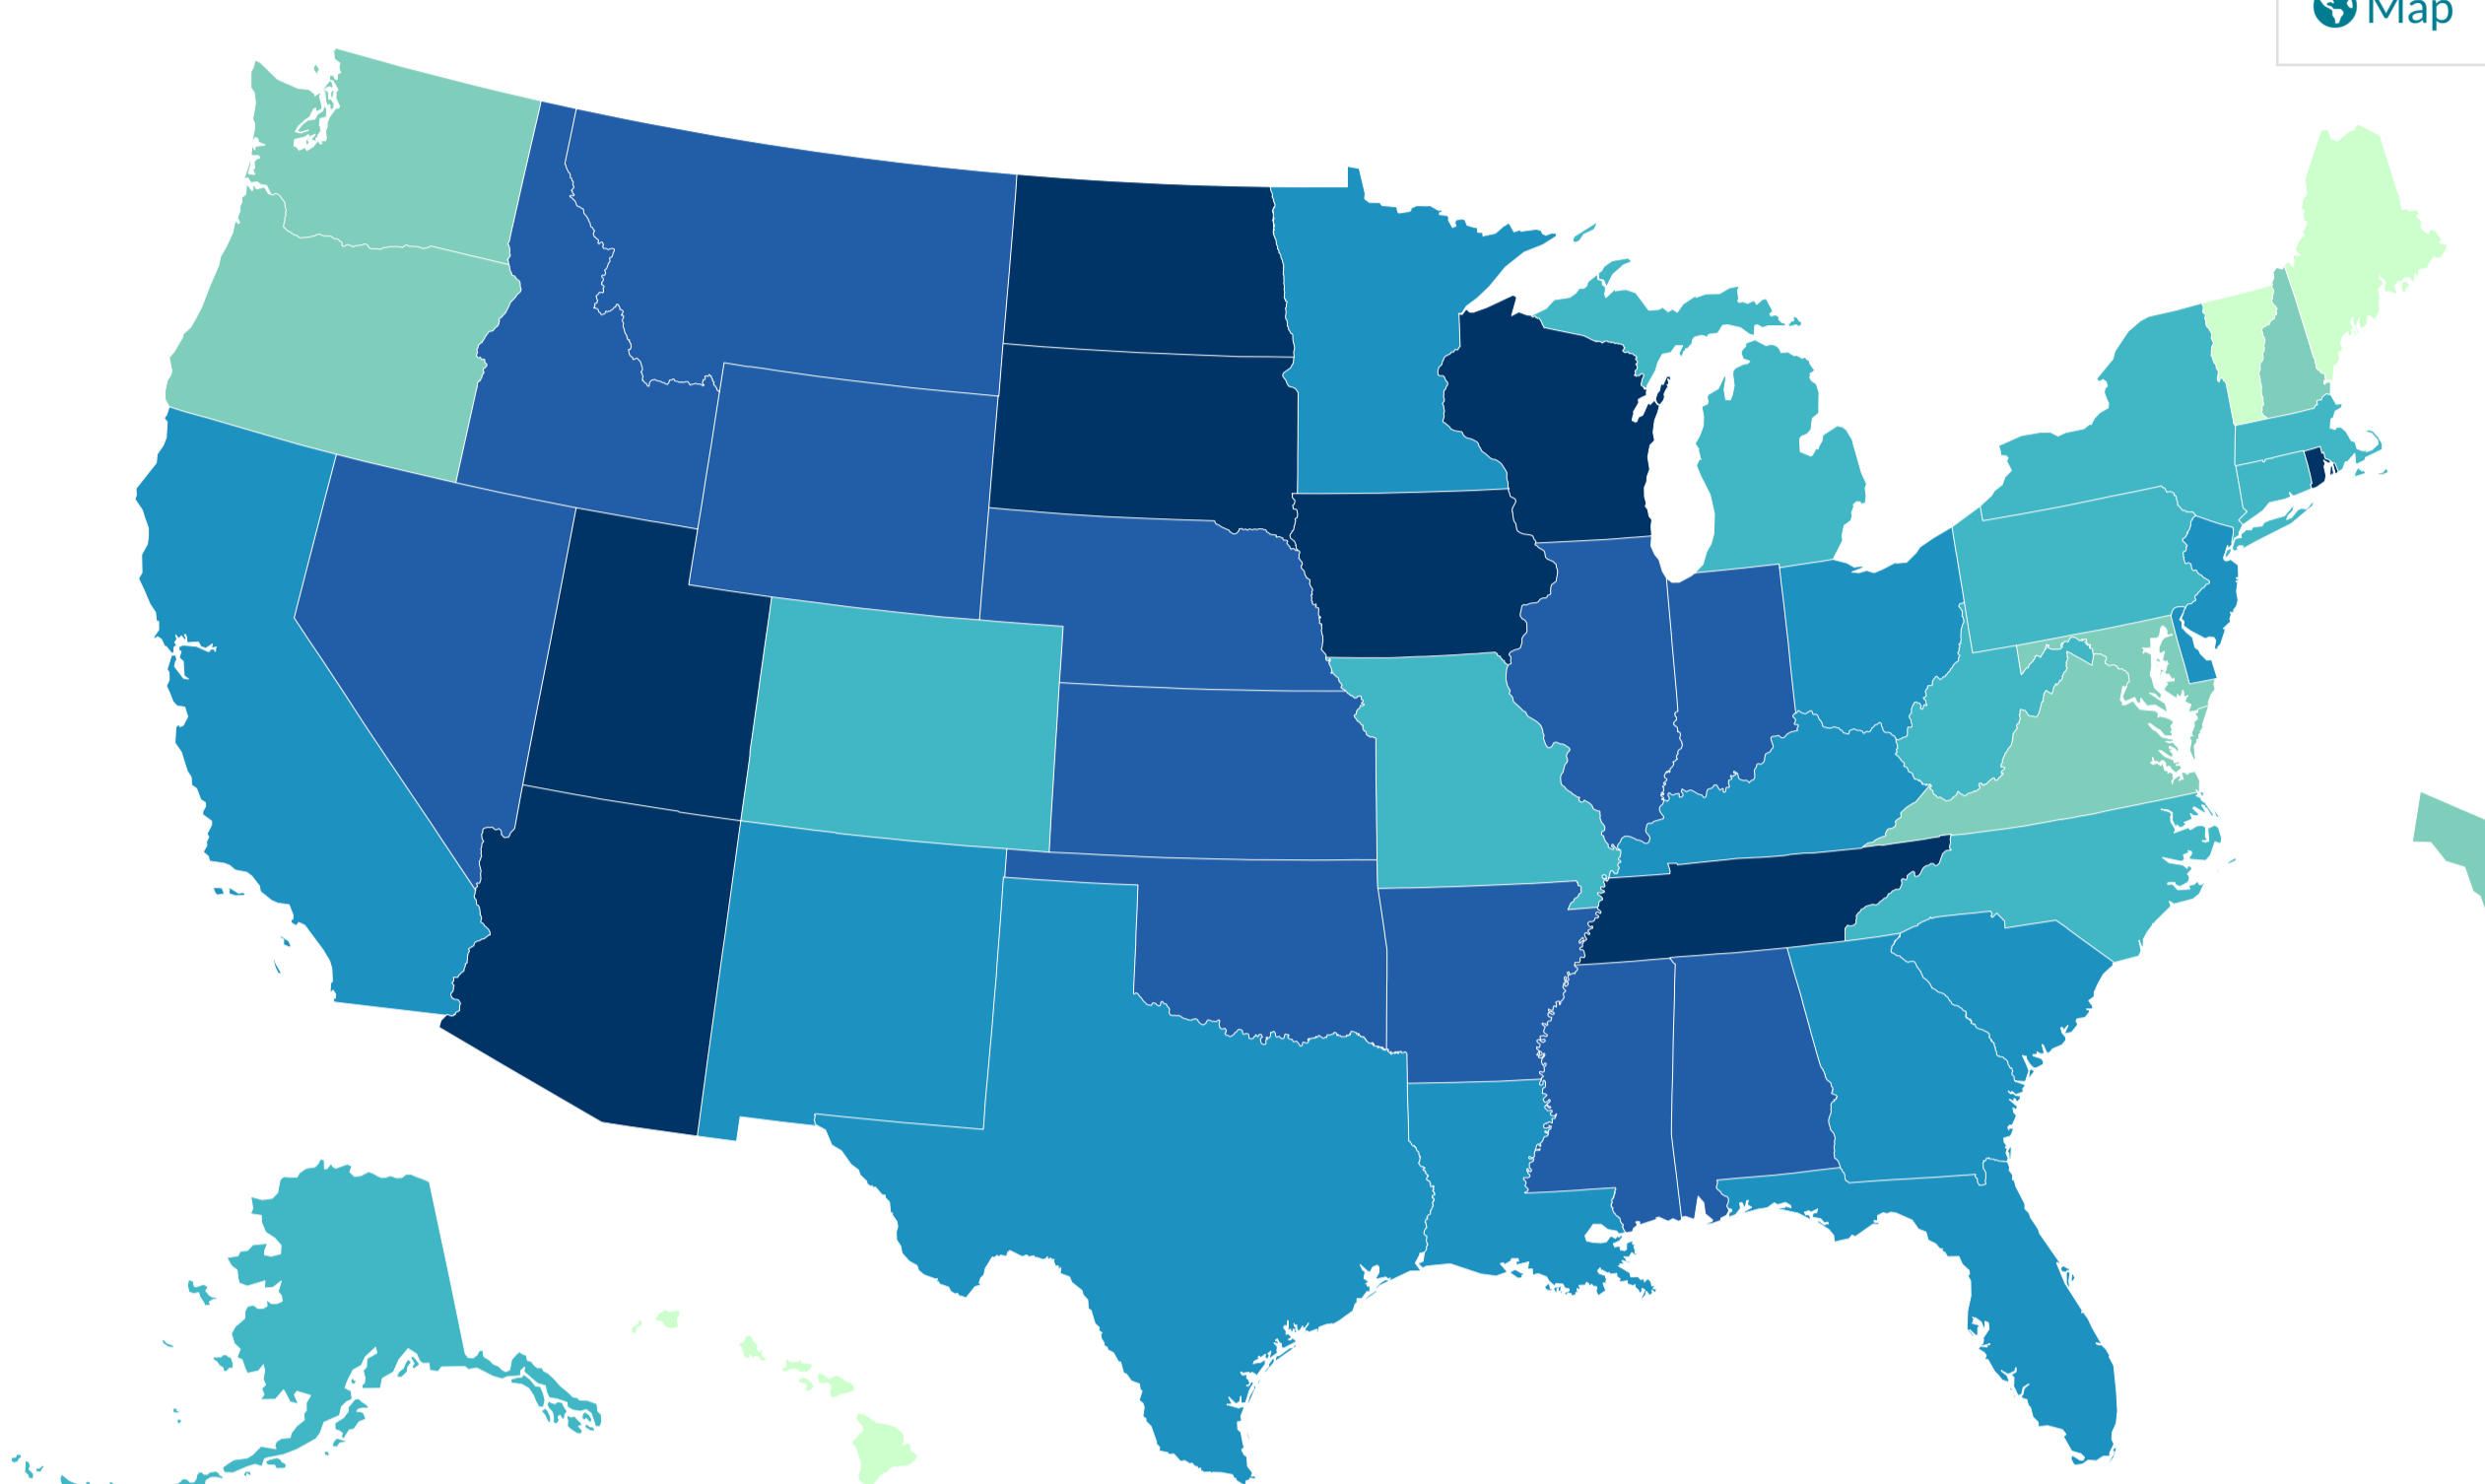

CDC | Updated: Jan 25 2021 5:16PM

**View:**

## Data Table for Case Rate by State/Territory

CDC | Updated: Jan 25 2021 5:16PM

[Download Data](#)

State/Territory ↕	Case Rate per 100,000 ↕
North Dakota	12,712
South Dakota	12,112
Utah	10,493
Tennessee	10,378
Rhode Island	10,359
Wisconsin	9,985
Arizona	9,927
Iowa	9,918
Nebraska	9,675
Oklahoma	9,582
Arkansas	9,413
Kansas	9,153
Indiana	9,076
Alabama	8,998
Idaho	8,926
Mississippi	8,909
Nevada	8,795
Wyoming	8,794
Illinois	8,695
Montana	8,575
Louisiana	8,257
Georgia	8,165
South Carolina	8,125
New Mexico	8,070
Minnesota	8,068
California	7,869
Kentucky	7,758
Texas	7,727
Delaware	7,658
Florida	7,539
New Jersey	7,462
Ohio	7,394
Missouri	7,324
Alaska	7,055
Massachusetts	7,048
New York*	6,932
New York City*	6,877
North Carolina	6,854
Colorado	6,708
Connecticut	6,670
West Virginia	6,434
Pennsylvania	6,280
Michigan	5,975
Maryland	5,676
Virginia	5,607
District of Columbia	5,002
New Hampshire	4,585
Guam	4,553
Washington	3,960
Oregon	3,276
Puerto Rico	2,868
Maine	2,756
Virgin Islands	2,236
Vermont	1,768
Hawaii	1,728
Republic of Marshall Islands	7
American Samoa	5
Federated States of Micronesia	1
Northern Mariana Islands	0
Palau	0

## How does COVID-19 Spread?

## Information on US COVID-19 Cases Caused by Variants

[Learn more here](#)[View and Download COVID-19 Case Surveillance Public Use Data](#)

† Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

**Data Sources, References & Notes:** The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019\* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019\* [American Community Survey 1-year estimates](#).

\*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
