Data Table for Total Cases by State/Territory

CDC | Updated: Jan 26 2021 12:16PM [Download Data](#)

State/Territory	Total Cases	Confirmed	Probable
California	3,136,158	N/A	N/A
Texas	2,246,845	N/A	N/A
Florida	1,627,830	N/A	N/A
Illinois	1,104,763	1,104,763	0
Georgia	870,828	722,062	148,766
Ohio	868,656	760,837	107,819
Pennsylvania	807,867	710,456	97,411
New York*	772,569	N/A	N/A
Arizona	727,895	683,316	44,579
North Carolina	723,445	649,864	73,581
Tennessee	710,427	605,335	105,092
New Jersey	666,951	598,660	68,291
Indiana	613,228	N/A	N/A
Michigan	600,093	551,080	49,013
Wisconsin	582,477	533,917	48,560
New York City*	582,175	501,017	81,158
Massachusetts	489,298	479,402	9,896
Virginia	483,326	389,259	94,067
Minnesota	455,783	N/A	N/A
Missouri	450,414	N/A	N/A
Alabama	443,009	350,988	92,021
South Carolina	421,417	379,775	41,642
Colorado	387,462	368,854	18,608
Louisiana	385,942	N/A	N/A
Oklahoma	380,647	299,839	80,808
Kentucky	347,836	274,512	73,324
Maryland	344,620	N/A	N/A
Utah	337,264	337,264	0
Iowa	313,515	N/A	N/A
Washington	302,141	N/A	N/A

†Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state or the death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
