Data Table for Case Rate by State/Territory

CDC | Updated: Jan 26 2021 12:16PM [Download Data](#)

State/Territory ↕	Case Rate per 100,000 ↕
North Dakota	12,729
South Dakota	12,115
Rhode Island	10,549
Utah	10,520
Tennessee	10,403
Wisconsin	10,004
Arizona	10,000
Iowa	9,937
Nebraska	9,708
Oklahoma	9,620
Arkansas	9,434
Kansas	9,242
Indiana	9,109
Alabama	9,035
Mississippi	8,958
Idaho	8,955
Nevada	8,827
Wyoming	8,816
Illinois	8,718
Montana	8,591
Louisiana	8,302
Georgia	8,202
South Carolina	8,185
New Mexico	8,093
Minnesota	8,082
California	7,937
Kentucky	7,786
Texas	7,749
Delaware	7,722
Florida	7,579
New Jersey	7,509
Ohio	7,431
Missouri	7,339
Massachusetts	7,099
Alaska	7,066
New York*	6,988
New York City*	6,932
North Carolina	6,898
Connecticut	6,833
Colorado	6,728
West Virginia	6,464
Pennsylvania	6,310
Michigan	6,009
Maryland	5,700
Virginia	5,662
District of Columbia	5,031
New Hampshire	4,616
Guam	4,564
Washington	3,968
Oregon	3,286
Puerto Rico	2,883
Maine	2,805
Virgin Islands	2,245
Vermont	1,789
Hawaii	1,736
Republic of Marshall Islands	7
American Samoa	5
Federated States of Micronesia	1
Northern Mariana Islands	0
Palau	0

† Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [an updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#).

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
