Demographic Trends of COVID-19 cases and deaths in the US reported to CDC

Maps, charts, and data provided by the CDC, updated daily by 8 pm ET^T
CDC is working with states to provide more information on race/ethnicity for reported cases. The

percent of reported cases that include race/ethnicity data is increasing.

These data only represent the geographic areas that contributed data on race/ethnicity. Every

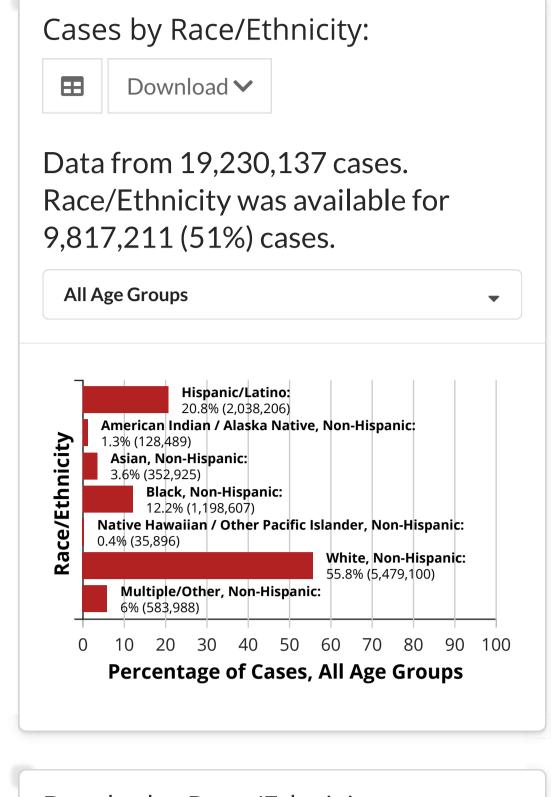

geographic area has a different racial and ethnic composition. These data are not generalizable to the entire U.S. population.

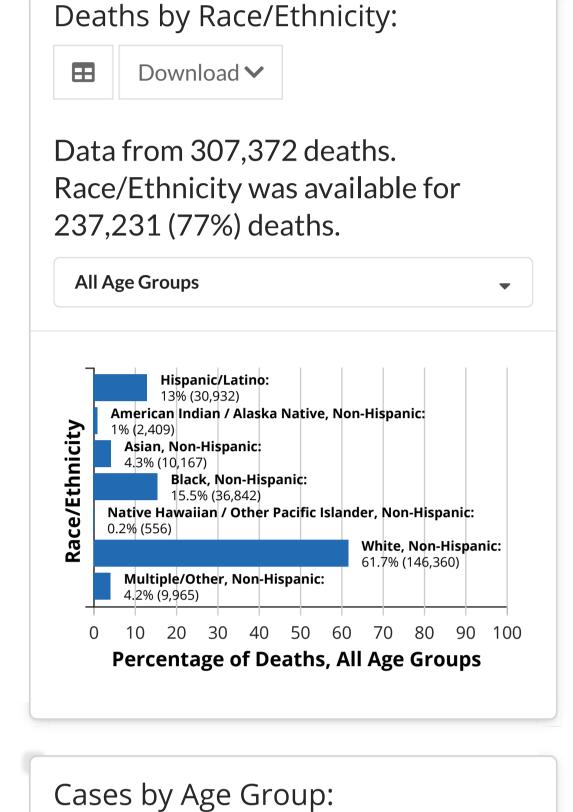

If cases were distributed equally across racial and ethnic populations, one would expect to see more cases in those populations that are more highly represented in geographic areas that contributed data.

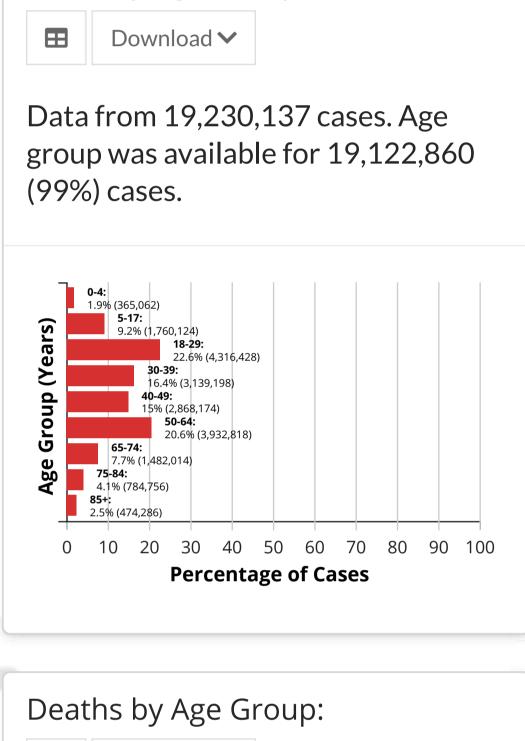

demographic variable of interest is known.

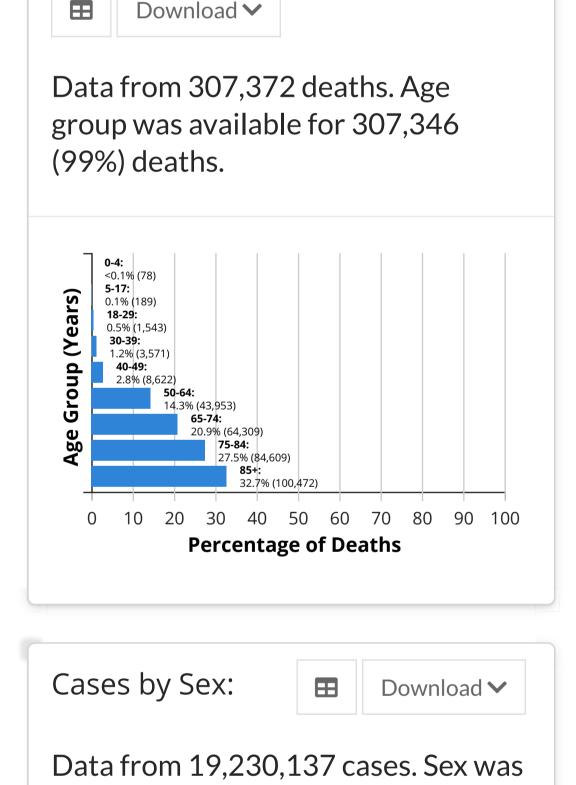

CDC | Updated: Jan 29 2021 2:40PM

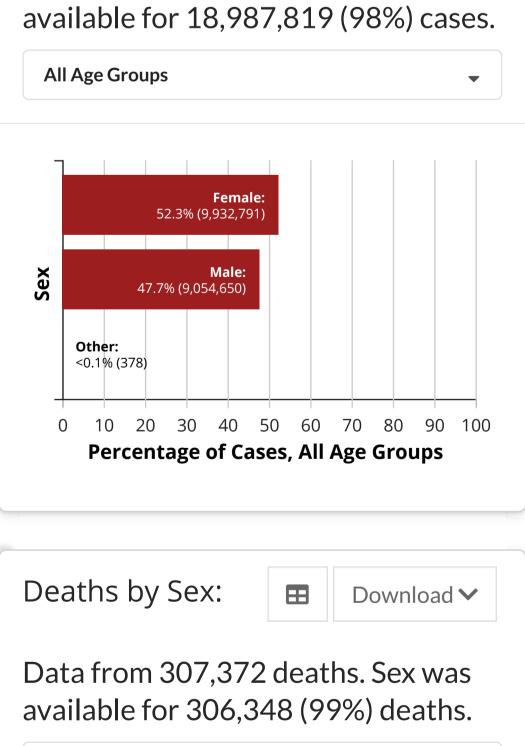

Percentages displayed in the charts below represent the percent of cases or deaths for which the

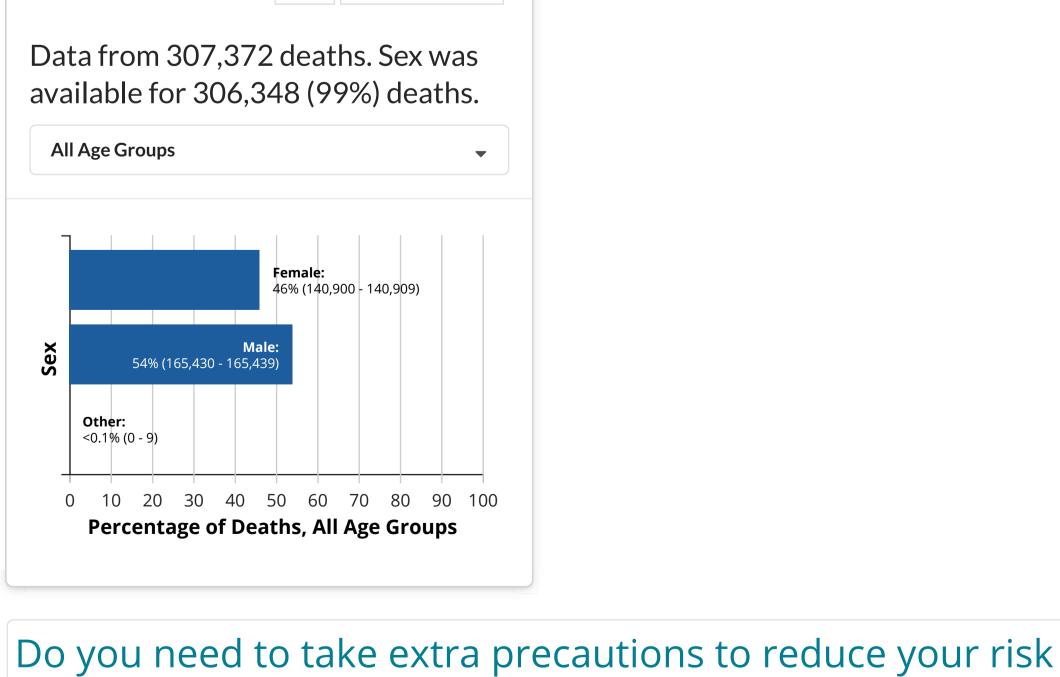

of contracting COVID-19? Find more information and resources for those at increased risk for COVID-19

†Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be

delayed due to delays in reported data. **Data Sources, References & Notes:** The case classifications for COVID-19, a nationally notifiable disease, are described

in an <u>updated interim COVID-19 position statement and case definition</u> issued by the Council of State and Territorial

Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at CDC's COVID-19 FAQ webpage. Demographic data for COVID-19 cases and deaths is based on a subset of individuals where case-level data are reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020. Demographic data have varying degrees of missing data and are not generalizable to the entire population of individuals with COVID-19. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. The process used for finding and confirming COVID-19 cases displayed by other sites may differ.
