Data Table for Cases in Last 7 Days by State/Territory

CDC | Updated: Jan 31 2021 12:26PM [Download Data](#)

State/Territory	Cases in Last 7 Days
California	139,334
Texas	120,301
Florida	72,143
New York*	46,203
Georgia	43,700
North Carolina	39,911
Pennsylvania	39,282
New York City*	38,525
Arizona	38,022
New Jersey	35,007
Ohio	32,940
Virginia	32,332
South Carolina	25,996
Illinois	25,346
Massachusetts	23,424
Tennessee	18,866
Louisiana	17,021
Kentucky	16,556
Indiana	16,440
Alabama	16,140
Oklahoma	15,738
Michigan	13,392
Maryland	13,021
Connecticut	12,208
Missouri	11,421
Washington	11,399
Arkansas	11,392
Wisconsin	10,994
Mississippi	10,782
Utah	10,541
Colorado	8,455
Kansas	8,032
Nevada	7,636
Minnesota	7,011
Iowa	6,472
West Virginia	5,588
New Mexico	4,960
Oregon	4,816
Rhode Island	4,703
New Hampshire	3,786
Nebraska	3,716
Delaware	3,636
Idaho	3,358
Puerto Rico	2,596
Maine	2,536
Montana	2,352
District of Columbia	1,585
Wyoming	1,121
South Dakota	1,107
Alaska	1,025
Vermont	923
North Dakota	813
Hawaii	723
Virgin Islands	80
Guam	32
Northern Mariana Islands	3
American Samoa	0
Federated States of Micronesia	0
Palau	0
Republic of Marshall Islands	0

†Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths recorded on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
