This shows the total number of COVID-19 deaths over the last 7 days.

Data Table for Deaths in Last 7 days by State/Territory	
CDC Updated: Feb 2 2021 6:03PM	
State/Territory	Deaths in Last 7 Days
California	3,790
Texas	2,145
Florida	1,239
Alabama	1,026
Pennsylvania	1,023
Georgia	939
Arizona	885
Tennessee	783
South Carolina	731
New York*	690
North Carolina	622
New York City*	579
New Jersey	548
Illinois	529
Ohio	462
Massachusetts	428
Iowa	418
Virginia	343
Louisiana	322
Kentucky	320
Michigan	317
Oklahoma	281
Mississippi	280
Indiana	261
Nevada	249
Arkansas	245
Wisconsin	237
Maryland	225
Connecticut	208
Missouri	195
Kansas	187
Washington	171
New Mexico	138
Colorado	129
West Virginia	129
Minnesota	104
Montana	83
Oregon	76
South Dakota	73
Utah	71
New Hampshire	69
Hawaii	68
Puerto Rico	63
Rhode Island	63
Maine	60
Idaho	54
Delaware	52
District of Columbia	37
Nebraska	27
Wyoming	25
North Dakota	7
Vermont	4
Alaska	3
American Samoa	0
Federated States of Micronesia	0
Guam	0
Northern Mariana Islands	0
Palau	0
Republic of Marshall Islands	0
Virgin Islands	0

[†]Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [an updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020 . However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
