Data Table for Cases in Last 7 Days by State/Territory

CDC | Updated: Feb 4 2021 5:20PM [Download Data](#)

State/Territory	Cases in Last 7 Days
Texas	140,378
California	111,357
Florida	66,819
North Carolina	43,297
New York*	38,325
Georgia	36,759
Pennsylvania	35,247
New York City*	32,550
New Jersey	29,270
Arizona	28,818
Ohio	28,443
South Carolina	23,563
Virginia	22,724
Illinois	22,050
Massachusetts	19,925
Tennessee	17,410
Kentucky	16,576
Alabama	15,970
Oklahoma	14,925
Indiana	14,155
Louisiana	13,819
Michigan	11,627
Arkansas	11,466
Washington	11,005
Maryland	10,288
Wisconsin	10,156
Connecticut	9,665
Utah	9,316
Colorado	9,009
Missouri	8,546
Mississippi	8,056
Nevada	6,834
Minnesota	6,449
Iowa	6,424
Kansas	6,398
West Virginia	4,695
New Mexico	4,605
Oregon	4,542
Nebraska	3,764
Rhode Island	3,695
New Hampshire	3,159
Delaware	3,150
Idaho	2,951
Puerto Rico	2,443
Montana	2,279
Maine	2,079
District of Columbia	1,334
South Dakota	1,031
Alaska	1,005
Vermont	950
Wyoming	920
North Dakota	729
Hawaii	599
Virgin Islands	67
Guam	50
Northern Mariana Islands	1
American Samoa	0
Federated States of Micronesia	0
Palau	0
Republic of Marshall Islands	0

[†]Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [an updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
