View and Download COVID-19 Case Surveillance Public Use Data

Data will update as soon as they are reviewed and verified, sometimes within 2-7 business days, but updates might be delayed due to delays in reported data.

Data on the number of administered vaccine doses received by CDC on the date of reporting. Vaccination data on the CDC COVID Data Tracker are reported by jurisdictional immunization information systems (IIS) and other reporting systems, including the Vaccine Administration Management System (VAMS).

Data shown include the total number of vaccine doses administered (first and second doses reported separately) and the number of people who have received at least one dose of vaccine. This also shows how far they are in the series. Publication of this data is consistent with the Advisory Committee on Immunization Practices (ACIP) recommendation that vaccine administration data be made publicly available in a standardized manner and frequency to assist vaccination programs with tracking vaccine administration rates and coverage.

The daily change in cumulative total doses administered by the date data are reported on CDC COVID Data Tracker.

Publication of this data is consistent with the Advisory Committee on Immunization Practices (ACIP) recommendation that vaccine administration data be made publicly available in a standardized manner and frequency to assist vaccination programs with tracking vaccine administration rates and coverage
