2007	5.2
2008	5.5
2009	5.8
2010	6.0

	12-19	2020-

Recent five days of reporting where the number of vaccine administrations might change over time as historical data are reported to the CDC.

Definitions:

Total doses administered are counts of individual COVID-19 vaccine doses administered as reported to CDC by state, territorial, and local public health agencies and federal entities since December 14, 2020.

People receiving 1 or more doses represent the total number of people who have received at least one dose of vaccine. People receiving 2 doses represent the

number of people who have also received a second dose of vaccine. **The number of people receiving 1 or more doses and the number of people receiving 2 doses were determined based on information reported to CDC by state, territorial, and local public health agencies and federal entities on dose number, administration date, recipient ID, and date of submission. Because the method used to determine dose numbers needs to be applied across multiple jurisdictions with different reporting practices, CDC's dose number estimates might differ from those reported by jurisdictions and federal entities. A dose number was determined for nearly all reported doses administered but, because there are some missing data for dose number, the sum of people receiving 1 or more doses and people receiving 2 doses will not exactly equal the total doses administered. Moreover, second-dose numbers represent counts within the first three weeks of the

Cumulative counts represent the total number of reported doses administered, the total number of people receiving 1 or more doses, and the total number of people receiving 2 doses by date of vaccine administration from the start of the vaccination program up to the current date.

Daily counts represent the number of reported doses administered, the number of people receiving 1 or more doses, and the number of people receiving 2 doses on a given day.

Daily change reported represents the daily change in the cumulative counts reported to CDC for the total number of doses administered in the United States. daily change is displayed by the date that CDC first reported the totals on CDC COVID Data Tracker.
