View:

7-Day moving average

The bar chart displays the daily count of people receiving 2 doses reported to the CDC by date administered in the United States. The x-axis represents the date from 2020-07-20 to 2020-08-05. The y-axis represents the count in thousands, ranging from 600k to 800k. The data shows a significant increase in counts starting around July 27, peaking at approximately 770k on August 4, and then decreasing on August 5.

Date Administered	Count (thousands)
2020-07-20	0

of people who have reached at least one stage of recovery. People reaching 3 or

people receiving 1 or more doses received a second (or third or fourth) dose were recorded as those who received at least one dose of vaccine. People who received 2 or more doses were determined based on information reported to CDC by state, territorial, and local public health agencies and federal entities on dose number, administration date, recipient ID, and date of submission. Because the method used to determine dose numbers needs to be applied across multiple jurisdictions with different reporting practices, CDC's dose number estimates might differ from those reported by jurisdictions and federal entities. A dose number was determined for nearly all reported doses administered but, because there are some missing data for dose number, the sum of people receiving 1 or more doses and people receiving 2 doses will not exactly equal the total doses administered. Moreover, second dose numbers reported within the first three weeks of the

Daily counts represent the number of reported doses administered, the number of people receiving 1 or more doses, and the number of people receiving 2 doses by date of vaccine administration. This represents the actual date a person received the vaccine.

Daily change

daily change is displayed by the date that CDC first reported the totals on CDC COVID Data Tracker.
