### Data Table for Cases in Last 7 Days by State/Territory

CDC | Updated: Feb 13 2021 4:01PM

[Download Data](#) 

| State/Territory                | Cases in Last 7 Days |
|--------------------------------|----------------------|
| Texas                          | 78,959               |
| California                     | 73,147               |
| Florida                        | 49,519               |
| New York City*                 | 31,242               |
| New York*                      | 30,958               |
| North Carolina                 | 27,245               |
| New Jersey                     | 26,738               |
| Pennsylvania                   | 26,582               |
| Georgia                        | 26,073               |
| Virginia                       | 21,247               |
| Ohio                           | 20,212               |
| South Carolina                 | 20,183               |
| Arizona                        | 17,910               |
| Illinois                       | 17,212               |
| Massachusetts                  | 15,338               |
| Tennessee                      | 15,248               |
| Kentucky                       | 12,058               |
| Oklahoma                       | 11,917               |
| Indiana                        | 11,254               |
| Alabama                        | 9,348                |
| Louisiana                      | 8,724                |
| Colorado                       | 8,700                |
| Michigan                       | 8,513                |
| Maryland                       | 8,052                |
| Connecticut                    | 7,965                |
| Washington                     | 7,796                |
| Utah                           | 7,152                |
| Arkansas                       | 6,885                |
| Wisconsin                      | 6,883                |
| Minnesota                      | 5,627                |
| Mississippi                    | 5,565                |
| Missouri                       | 5,304                |
| Iowa                           | 4,630                |
| Kansas                         | 4,540                |
| Nevada                         | 4,530                |
| Oregon                         | 3,439                |
| West Virginia                  | 3,246                |
| New Mexico                     | 2,931                |
| Rhode Island                   | 2,930                |
| Delaware                       | 2,717                |
| New Hampshire                  | 2,477                |
| Idaho                          | 2,256                |
| Nebraska                       | 2,066                |
| Puerto Rico                    | 1,958                |
| Montana                        | 1,605                |
| Maine                          | 1,355                |
| South Dakota                   | 1,124                |
| District of Columbia           | 1,036                |
| Alaska                         | 1,003                |
| Vermont                        | 803                  |
| Wyoming                        | 510                  |
| North Dakota                   | 454                  |
| Hawaii                         | 431                  |
| Virgin Islands                 | 75                   |
| Guam                           | 53                   |
| Northern Mariana Islands       | 1                    |
| American Samoa                 | 0                    |
| Federated States of Micronesia | 0                    |
| Palau                          | 0                    |
| Republic of Marshall Islands   | 0                    |

### How does COVID-19 Spread?

Data

<sup>†</sup>Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

On February 13, 2021, a state reported 1,507 new deaths. CDC is working with the state to assess the time period from which these data cover. This may temporarily impact death counts, rates and averages.

**Data Sources, References & Notes:** The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day.

Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York state are shown for New York City state total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and total rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019 American Community Survey 1-year estimates. Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019 American Community Survey 1-year estimates.

\*2018 Population estimates are still used for American Samoa, Federated States of Micronesia, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts and previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and spikes may occur. The process used to find and confirm COVID-19 cases and deaths displayed by other sites may differ.

On December 1, 2020, Texas reported 171,505 historical counts of probable cases with dates between November and December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
